# 100LVELT22 3.3V Dual LVTTL/LVCMOS to Differential LVPECL Translator

# **General Description**

The 100LVELT22 is a LVTTL/LVCMOS to differential LVPECL translator operating from a single  $\pm 3.3$ V supply.

Both outputs of a differential pair should be terminated in  $50\Omega$  to  $V_{CC}$  - 2.0V even if only one output is being used. If an output pair is unused both outputs can be left open (un-terminated).

The 100 series is temperature compensated.

## **Features**

- Typical propagation delay of 350 ps
- <100 ps skew between outputs
- Max I<sub>CC</sub> of 28 mA at 25°C
- When TTL input is left Open Q output defaults HIGH
- Fairchild MSOP-8 package is a drop-in replacement to ON TSSOP-8
- Flow through pinout
- Meets or exceeds JEDEC specification EIA/JESD78 IC latch-up test
- Moisture Sensitivity Level 1
- ESD Performance:

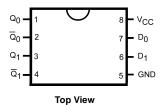

Human Body Model > 2000V Machine Model > 200V

# **Ordering Code:**

		Product	
Order Number	Package	Code	Package Description
	Number	Top Mark	
100LVELT22M	M08A	KVT22	8-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow
100LVELT22M8 (Preliminary)	MA08D	KR22	8-Lead Molded Small Outline Package (MSOP), JEDEC MO-187, 3.0mm Wide

Devices also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
