About this Ordering Guide

With more than 300,000 development tools installed worldwide, Microchip's tools are well known for their seamless integration under the intuitive MPLAB Interactive Development Environment (IDE), the breadth of products which cover all stages of the product development cycle, and the highest level of support and service. These development tools provide faster time to market and lower total system cost for engineers, offering a clear competitive advantage to using Microchip silicon solutions.

This ordering guide covers many new development tools, including the MPLAB PM3 Universal Device Programmer, MPLAB C30 Compiler for dsPIC30F, and a complete tools suite for the new dsPIC30F device family. For detailed and current information, please visit Microchip's web site at www.microchip.com.

Microchip Technology Service and Support

Quality

Design and manufacturing continuous improvement processes are put in place to ensure high quality in Microchip Development Systems product offerings.

Warranty

Development system products are warranted against defects for one (1) year (90 days for those products that we normally sell for $500 or less (USD), excluding promotional pricing).

Upgrade

Software upgrades are available free-of-charge from the Microchip web site (www.microchip.com). Hardware enhancements are also available free-of-charge or at a nominal fee. Contact your local distributor for more information.

Service

Prompt system service is essential – customers depend on our systems to design and program PICmicro® and dsPIC® microcontrollers. Defective components are typically replaced within 48 hours. Microchip's Service Center in Tempe, Arizona serves customers in the US and Canada. Our European Service Center in Dublin provides service to customers in Europe, the Middle East and Africa. The Far East sales offices provide these services directly.

INTRODUCTION

Microchip Internet Connections

On-Line Support

Microchip provides many avenues of on-line support on the Microchip web site at:

www.microchip.com

Users may download files for the latest development tools, data sheets, application notes, user's manuals, articles, and sample programs. Microchip-specific business information is also available, including contact information for all Microchip sales offices and distributors.

The MPLAB® Integrated Development Environment (IDE) software can be downloaded free-of-charge. MPLAB IDE includes a project manager, assembler/linker, and simulator debugger for embedded-system development. Additional tools are available for purchase for device programming, in-circuit debugging, and C compiling. MPLAB IDE is the development environment for most of the Microchip development tools listed in this guide.

Development tools, Microchip PICmicro MCUs, dsPIC® DSC devices, Analog/Interface, and Memory devices are available on the web site for purchase with a credit card and delivery in the U.S., Canada or Europe.

The following are some of the many services available on the web site:

- Latest data sheets, application notes and user manuals
- Device errata
- Technical support section with FAQs
- Device programming specifications
- Latest file updates for demonstration and evaluation kits
- Design tips
- Subscription to Microchip Change Notification service for silicon and development tools
- Microchip consultant program member listing
- Third party tools contacts
- Web seminars

- Listing of field seminars and upcoming events
- Conferences for products, development systems, technical information and more
- University Corner
- Latest Microchip press releases
- Job postings
- Links to other useful web sites related to Microchip products

Development Systems Information and Upgrade Hot Line

The Development Systems Information and Upgrade Information Line provides a listing of the latest versions of all of Microchip's development systems software products. In addition, this line provides information on the most current upgrade kits. The information line numbers are:

1-800-755-2345 for U.S. and most of Canada.

1-480-792-7302 for the rest of the world.

MPLAB® Integrated Development Environment (IDE)

MPLAB IDE gives PICmicro® MCU and dsPIC® DSC users the flexibility to edit, compile and debug from a single user interface.

MPLAB IDE gives PICmicro® MCU and dsPIC® DSC users the flexibility to edit, compile and debug from a single user interface. MPLAB Integrated Development Environment (IDE) is a development platform for the Microchip Technology PICmicro microcontroller (MCU) and dsPIC DSC families. Designed for use with the Microsoft Windows® operating environment, MPLAB IDE offers an easy-to-use common user interface for the Microchip development tools suite.

MPLAB IDE includes the following components:

- MPASM™ Assembler
- MPLAB ASM30 Assembler for dsPIC30F
- MPSIM™ Software Simulator
- MPSIM 30 Software Simulator for dsPIC30F
- MPLINK™ Linker
- MPLAB LINK30 Linker for dsPIC30F

- Source Level Debugger
- On-line Help
- Project and set-up wizards
- Project Manager
- Visual Device Initializer
- Programmer's Editor
- Drivers for hardware tools (as listed in the Tools Supported section)
- Integration with Source Code Control

The MPLAB IDE desktop provides the development environment and tools for developing and debugging applications as a project, providing common user interface for different development and debugging modes.

Features

- Full featured, color coded text editor
- Easy-to-use project manager with visual display
- Source level debugging
- Enhanced source level debugging for 'C' structures, automatic variables, etc.
- Customizable toolbar and key mapping
- Dynamic status bar displays processor condition at a glance
- Context sensitive, interactive on-line help
- Integrated MPLAB SIM instruction simulator
- User interface for MPLAB PM3 and PICSTART® Plus device programmers
- User interface for MPLAB ICE 2000 or MPLAB ICE 4000 In-Circuit Emulator
- User interface for MPLAB ICD 2 In-Circuit Debugger

Application Maestro™ Software
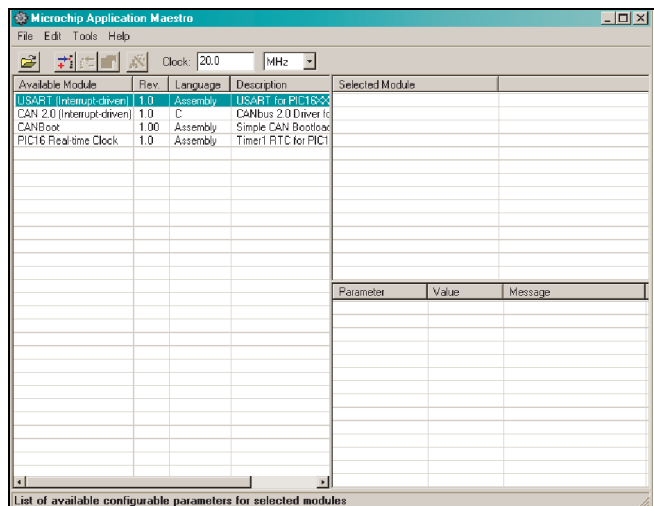

The Microchip Application Maestro Software is a stand-alone software tool that allows users to configure and incorporate a range of pre-written firmware modules into their applications. Its heart is a collection of modules developed by Microchip Technology for use with its PICmicro® microcontrollers. Starting from a graphic interface, the user selects one or more available modules, then configures the parameters for each. When this is complete, the Application Maestro Software then generates code that can be incorporated into the user's application project, using MPLAB® IDE or any compatible development environment.

It is important to note that the Application Maestro Software is not a plug-in or add-on to the MPLAB line of development tools; it is a separate item in its own right. Application Maestro Software also differs from other librarian systems, such as MPLIB™ Library, because it does more than archive and manage related files for a single software project. Instead, it manages a library of ready-to-configure modules that the user customizes to their needs, and creates the necessary files for inclusion in the user's projects on demand.

Ordering Information:

Free download: www.microchip.com

FREE

NEW

MPLAB® Visual Device Initializer Software
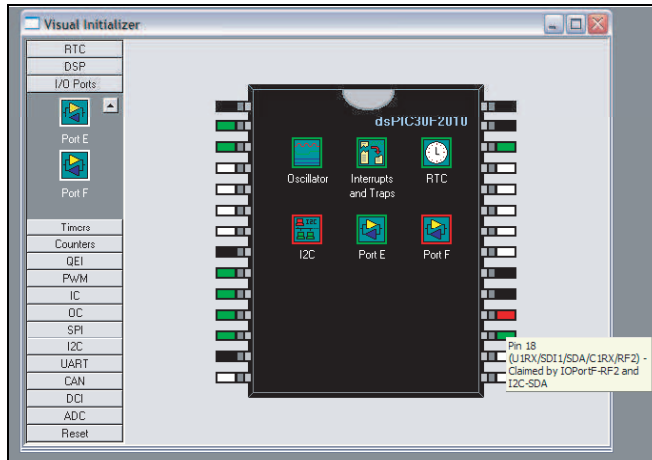

Microchip's MPLAB Visual Device Initializer allows users to configure a powerful 16-bit DSC device graphically, and when complete, a mouse click generates code usable in Assembly or C programs.

MPLAB Visual Device Initializer does extensive error checking on assignments and conflicts on pins, memories and interrupts, as well as a selection of operating conditions. The generated code files are seamlessly integrated with the rest of the application code through MPLAB Project.

The detailed reports on resource assignment and configuration simplify project documentation.

Features

- Drag-and-drop feature selection
- One-click configuration
- Extensive error checking
- Generates initialization code
- Integrates seamlessly in MPLAB Project
- Printed reports ease project documentation requirements

dsPIC30F Math Library

The dsPIC30F Math Library is the compiled version of the math library that is distributed with the highly optimized, ANSI-compliant dsPIC30F MPLAB® C30 compiler (SW006012). It contains advanced single- and double-precision, floating-point arithmetic and trigonometric functions from the standard C header file `<math.h>`. The library delivers small program code size and data size, reduced cycles and high accuracy.

Features

- The math library is callable from either MPLAB C30 or dsPIC30F Assembly language.
- The functions are IEEE-754 compliant, with signed zero, signed infinity, NaN (Not a Number) and denormal support and operate in the "round-to-nearest" mode.
- Compatible with MPLAB ASM30 and MPLAB LINK30, which are available at no charge from Microchip's web site.
- Total library memory usage[1, 2]:
    - Code size: 5250 bytes
    - Data size: 4 bytes

dsPIC™ Math Library Function and Performance Table

Function Group	Function	Performance (Cycles)[1,2,3,4]
Basic Floating Point	Addition	122
	Subtraction	124
	Multiplication	109
	Division	361
	Remainder	385
Trigonometric and Hyperbolic	acos	478
	asic	363
	atan	696
	atan2	3206
	cos	3249
	sin	2238
	tan	2460
	cosh	1049
	sinh	525
	tanh	338
Logarithmic and Exponential	exp	530
	frexp	39
	ldexp	44
	log	2889
	log10	3007
Power Functions	pow	2134
	sqrt	493
Rounding Functions	ceil	94
	floor	51
Absolute Value Function	fabs	6
Modular Arithmetic Functions	modf	151
	fmod	129

1: Results are based on using the dsPIC30F MPLAB C30 Compiler (SW006012) version 1.20.
2: Maximum "Memory Usage" when all functions in the library are loaded. Most applications will use less.
3: All performance statistics represented here are for 32-bit IEEE754 floating-point input and output data types.
4: Performance (in instruction cycles) listed here represent an average number of instruction cycles required to perform the floating-point operation.

dsPIC30F DSP Library

The dsPIC30F DSP Library provides a set of speed-optimized functions for the most common digital-signal-processing applications. The DSP Library provides significant performance savings over equivalent functions coded in "C" and allows developers to dramatically shorten their development time.

The DSP Library is written predominantly in Assembly language and makes extensive use of the dsPIC30F DSP instruction set and hardware resources, including X and Y memory addressing, modulo addressing, bit-reversed addressing, 9.31 saturation and REPEAT and DO loops. It provides functions for vector, matrix, filtering, transform and window operations

Features

- 49 total functions
- Full compliance with the Microchip dsPIC30F C30 Compiler, Assembler and Linker

- Simple user interface – just one library file and one header file
- Functions are both "C" and Assembly callable
- FIR filtering functions include support for Lattice, Decimating, Interpolating and LMS filters
- IIR filtering functions include support for Canonic, Transposed Canonic and Lattice filters
- FIR and IIR functions may be used with the filter files generated by the dsPIC™ Digital Filter Design Tool
- Transform functions include support for in-place and out-of-place DCT, FFT and IFFT transforms
- Window functions include support for Bartlett, Blackman, Hamming, Hanning and Kaiser windows
- Support for Program Space Visibility
- Complete function profile information including register usage, cycle count and function size information

Function Execution Times Table

Function	Cycle Count Equation	Conditions*	Number of Cycles	Execution Time @30 MIPS
Complex FFT**	–	N=64	3739	124.6 ms
Complex FFT**	–	N=128	8485	282.8 ms
Complex FFT**	–	N=256	19055	635.2 ms
Block FIR	53+N(4+M)	N=32, M=32	1205	40.2 ms
Block FIR Lattice	41+N(4+7M)	N=32, M=32	7337	244.6 ms
Block IIR Canonic	36+N(8+7S)	N=32, S=4	1188	39.6 ms
Block IIR Lattice	46+N(16+7M)	N=32, M=8	2350	78.3 ms
Matrix Add	20+3(C*R)	C=8, R=8	212	7.1 ms
Matrix Transpose	16+C(6+3(R-1))	C=8, R=8	232	7.7 ms
Vector Dot Product	17+3N	N=32	113	3.8 ms
Vector Max	19+7(N-2)	N=32	229	7.6 ms
Vector Multiply	17+4N	N=32	145	4.8 ms
Vector Power	16+2N	N=32	80	2.7 ms

C = #columns, N = # samples, M = # taps, S = # sections, R = # rows
**Complex FFT routine inherently prevents overflow.

dsPIC30F Peripheral Library

The dsPIC30F Peripheral Library provides a set of functions for setting up and controlling the operation of all the peripheral modules available in the dsPIC30F devices, as well as functions for interfacing with an external LCD. The Peripheral Library serves as a convenient layer of abstraction over the specific details of the peripherals and their associated control and status registers.

The dsPIC30F Peripheral Library supports the following hardware peripheral modules:

- Timers
- Input Capture
- Output Compare
- Quadrature Encoder Interface (QEI)
- Motor Control PWM
- I/O Ports and External Interrupts
- Reset
- UART
- SPI™
- I^{2}C™
- Data Converter Interface (DCI)
- 10-bit A/D Converter
- 12-bit A/D Converter
- CAN

Functions for controlling an external LCD through configurable I/O Port pins are also provided

Features

- For each individual device from the dsPIC30F family, there is a file that includes functions corresponding to peripherals present in that particular device
- C include files enable the user to take advantage of pre-defined constants for passing parameters to various library functions. There is an include file for each peripheral module.
- Since the functions are in the form of pre-compiled libraries, they may be called from a user application program written in either MPLAB® C30 or dsPIC30F Assembly language.
- C source code is also included so users can customize the functions to suit specific application requirements.
- Pre-defined constants in C include files eliminating the need to refer to details and structure of Special Function Registers, while initializing peripherals or checking status bits.

Resource Requirements

Program Memory
The Peripheral Library functions have been optimized for reduced Program Memory usage. Since the functions are in the form of libraries, the actual Program Memory requirements depend on the functions being called by the application, as well as on the specific dsPIC30F device being used.

Data Memory
The vast majority of the functions do not use RAM at all. Each of the remaining functions uses less than 10 bytes of RAM.

dsPIC30F Soft Modem Library

The Microchip Soft Modem Library is composed of ITU-T compliant algorithms for V.21, V.22, V.22bis, V.23, V.32 and V.32bis modem recommendations. Bell standard 103 is also included in this library.

V.21, V.23 and Bell 103 are Frequency Shift Keying (FSK) modems. V.32, V.32bis and V.22bis are Quadrature Amplitude Modulated (QAM) modems. V.22 is a Quadrature Phase Shift Keyed (QPSK) modem. V.21, V.22, V.22bis, V.32 and V.32bis are all 2-wire, full duplex modems. V.23 is full duplex when it operates with a 75 bps backwards channel.

V.22bis includes fallback to V.22, V.23 and V.21 standards. V.32bis optionally falls back to V.22bis, V.22, V.23 and V.21 standards.

Features

The data modem library is provided in two basic software packages:

- V.22bis/V.22, which is offered free with full source code
- V.32bis/V.32, which is offered in a tiered pricing structure, with full source code

The library currently supports single channel data-pump implementations.

Both libraries are supported with fallback data pump modulations down to V.21. Each data modem library is provided with a respective library archive containing all the data pump object code modules required to link to the user's application. Hardware component drivers, such as UART and Data Converter Interface for DAA/AFE I/O, are provided in Assembly source code for linking with the user's application.

ITU-T Recommendation V.42 is provided with each library. V.42 contains a High Level Data Link Control (HDLC) protocol referred to as Link Access Procedure for Modems (LAPM) and defines error correcting protocols for modems.

All data pump modulations are developed in ASM30 Assembly code yielding optimal code size and execution time. The AT, V.42 and Data Pump APIs are based on C30 C language.

Electronic documentation accompanies the modem library to help you become familiar with and implement the library functions. A comprehensive *Soft Modem User's Guide* describes the required APIs for the AT, V.42 and data pump layers.

dsPIC30F Speech Recognition Library

The dsPIC30F Speech Recognition Library provides voice control of embedded applications that require an alternative user interface. With a vocabulary of up to 100 words, the Speech Recognition Library allows users to control their applications vocally. The Speech Recognition Library is an ideal front-end for hands-free products, such as modern appliances, security panels and cell phones. The Speech Recognition Library has very modest memory and processing requirements.

Features

- Speaker-independent recognition of isolated words
- Hidden Markov model-based recognition system
- Recognition time < 500 msec
- Master library of 100 common words
- Windows® based utility allows you to create a custom library from the master library
- Additional words can be added to the master library (fee-based)
- No speaker training is required
- US english language support
- Data tables can be stored in external memory
- Optional keyword activation and silence detection
- Optional system self-test using a predefined keyword
- Flexible API
- Full compliance with Microchip MPLAB® C30 language tools
- *dsPIC30F Speech Recognition Library User's Guide*
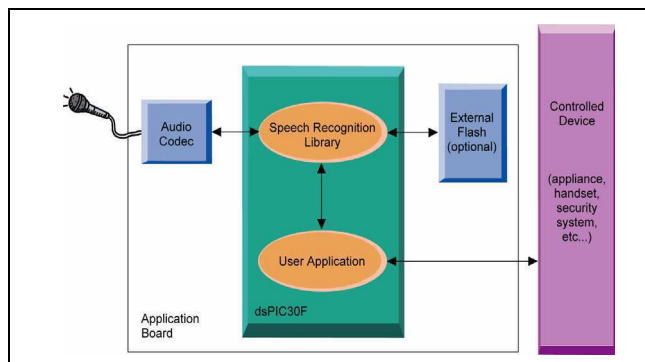

The Speech Recognition Library provides isolated, speaker-independent word recognition of US English. It allows the user to control an application through a set of fixed, voice commands.

The library has already been pre-trained by a demographic cross-section of male and female US English speakers. Conveniently, no training is required for end-users of the product.

The library samples speech data from a voice codec connected to the dsPIC30F's Data Converter Interface. The data is processed a frame at a time, and when a word ending is detected, the received word is identified using Hidden Markov Model processing. After the library identifies the word, your application may then take some pre-defined action.

The Speech Recognition algorithm is written in Assembly language to optimize performance and minimize RAM usage. A well defined API makes it easy to integrate the Speech Recognition Library with your application. Library functions let your application easily disable and enable speech recognition. The library lets your other system processing operations take place without disrupting speech recognition.

dsPIC30F Noise Suppression Library

The dsPIC30F Noise Suppression Library provides a function to suppress the effect of noise interference with a speech signal. This function is useful for microphone-based applications, which have a potential for incoming speech corruption by ambient noise captured by the microphone. It is especially suitable for systems in which an acoustically isolated noise reference is not available, such as:

- Hands-free Cell Phone Kits
- Speakerphones
- Intercoms
- Teleconferencing Systems
- Headsets
- As a front-end to a Speech Recognition system (e.g., SW300010)
- Any microphone-based application that needs to eliminate undesired noise

Features

- Only 2 user functions ("NoiseSuppressionInit" and "NoiseSuppression"), both of which can be called from either a C or Assembly application program
- Full compliance with the Microchip dsPIC30F C30 Compiler, Assembler and Linker
- Simple user interface – just one library file and one header file
- Highly optimized Assembly code, utilizing DSP instructions and advanced addressing modes
- Audio Bandwidth: 0-4 kHz at 8 kHz sampling rate
- 10-20 dB noise reduction, depending on the type of noise
    - Several speech recordings corrupted by Babble, Car Cabin, White and Narrowband Noise included for library evaluation
- Source code is provided with the library
- *dsPIC30F Noise Suppression Library User's Guide* is provided to help the user understand and use the library
- Demo application source code is provided with the library
- Accessory Kit available for purchase includes: an audio cable, headset, oscillators, microphone, speaker, DB9 M/F RS-232 cable, DB9M-DB9M null modem adapter and can be used for library evaluation

dsPIC30F Acoustic Echo Cancellation Library

The dsPIC30F Acoustic Echo Cancellation (AEC) Library provides a function to eliminate echoes generated in the acoustic path between a speaker and a microphone. This function is useful for speech and telephony applications in which a speaker and a microphone are located in close proximity to each other, and therefore susceptible to signals propagating from the speaker to the microphone resulting in a perceptible and distracting echo effect at the far end. It is especially suitable for these applications:

- Hands-free Cell Phone Kits
- Speakerphones
- Intercoms
- Teleconferencing Systems

For hands-free phones intended to be used in compact environments, such as a car, this library is fully compliant with the G.167 standard for acoustic echo cancellation.

Features

- Only 2 user functions ("AcousticEchoCancellerInit" and "AcousticEchoCanceller"), both of which can be called from either a C or Assembly application program
- Full compliance with the Microchip dsPIC30F C30 Compiler, Assembler and Linker simple user interface – just one library file and one header file
- Highly optimized Assembly code, utilizing DSP instructions and advanced addressing modes
- Echo cancellation for 16, 32 or 64 ms echo delays or 'tail lengths' (configurable)
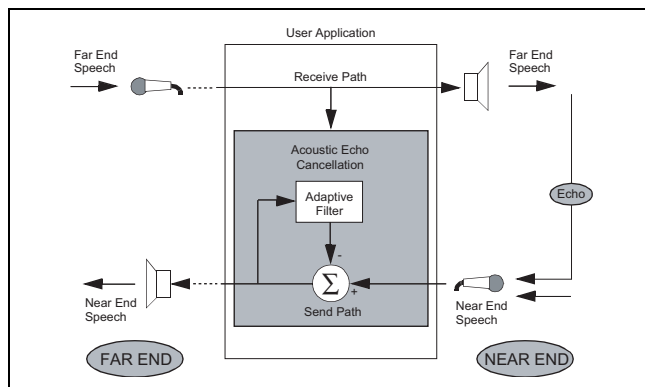

- Fully tested for compliance with G.167 specifications for in-car applications
- Audio Bandwidth: 0-4 kHz at 8 kHz sampling rate
- Convergence Rate: Up to 43 dB/sec., typically > 30 dB/sec.
- Echo Cancellation: Up to 50 dB, typically > 40 dB
- Can be used together with the Noise Suppression (NS) Library, since the same processing block size (10 ms) is used
- *dsPIC30F Acoustic Echo Cancellation Library User's Guide* is provided to help the user understand and use the library
- Demo application source code is provided with the library. Accessory kit available for purchase includes: an audio cable, headset, oscillators, microphone, speaker, DB9 M/F RS-232 cable and DB9M-DB9M Null Modem Adapter and can be used for library evaluation

dsPIC™ Symmetric Key Embedded Encryption Library

Microchip offers a reliable security solution for embedded applications built on the dsPIC30F platform. This solution is provided by means of two libraries – Symmetric Key and Asymmetric Key Embedded Encryption libraries. The Symmetric Key library features the following:

- Hash Functions
    - SHA-1 Secure Hash Standard
    - MD5 Message Digest
- Symmetric-Key Encryption/Decryption Functions
    - Advanced Encryption Standard (AES)
    - Triple Data Encryption Algorithm (Triple-DES)
- Random Number Generator Functions
    - Deterministic Random Bit Generator ANSI X9.82

Features

- C-callable library functions developed in MPLAB® ASM30
- Assembly language
- Optimized for speed, code size and RAM usage:
    - RAM usage below 60 bytes
- Library functions extensively tested for adherence to applicable standards
- Symmetric Key Encryption/Decryption functions support multiple modes of operation:
    - Electronic Code Book (ECB) mode
    - Cipher Block Chaining with Message Authentication (CBC-MAC) mode
    - Counter (CTR) mode
    - Combined CBC-MAC and Counter (CCM) mode
- A comprehensive *dsPIC30F Embedded Encryption Libraries User's Guide* describing the required APIs for the library functions
- Several examples of use are provided for each library function

dsPIC™ Asymmetric Key Embedded Encryption Library

Microchip offers a reliable security solution for embedded applications built on the dsPIC30F platform. This solution is provided by means of two libraries – Symmetric Key and Asymmetric Key Embedded Encryption libraries. The Asymmetric Key library implements the following:

- Public Key Encryption/Decryption Functions
    - RSA (1024 and 2048 bit)
- Key Agreement Protocol
    - Diffie-Hellman (1024 and 2048 bit)
- Signing and Verification
    - DSA (1024 bit)
    - RSA (1024 and 2048 bit)
- Hash and Message Digest Functions
    - SHA-1, MD5
- Random Number Generator (RNG)
    - ANSI X9.82

Features

- C-callable library functions developed in MPLAB ASM30 Assembly language
- Optimized for speed, code size and RAM usage
    - RAM usage below 100 bytes
- Library functions extensively tested for adherence to applicable standards
- A comprehensive *dsPIC30F Embedded Encryption Libraries User's Guide* describing the required APIs for the library functions
- Several examples of use provided for each library function

Typical Applications

The algorithms supported by this library have emerged as the defacto standard for many large-scale, secured applications like web access, e-mail, secure XML transactions and virtual private networks (VPN). These algorithms are also recommended by most Internet Engineering Task Force (IETF), Federal Information Processing Standards (FIPS) and IPSec Standards. Some typical applications for this library include:

- Mobile and wireless devices, PDAs
- Secure banking
- Secure web transactions
    - Secure Socket Layer (SSL)
    - Transport Layer Security (TLS)
    - Secure Multipurpose Internet Mail Extensions (S/MIME)
    - ZigBee™ technology and other monitoring and control applications
- Smart card readers
- Friend/foe identification
- Peripherals inter-operating with TCG and NGSCB personal computers

The Trusted Computing Group (TCG) and related Microsoft® Next Generation Secure Computing Base (NGSCB), both specify RSA and Triple-DES. AES, Triple DES and other symmetric solutions, are featured in the dsPIC30F Symmetric Key Embedded Encryption Library (SW300050).

CMX-MicroNet™ for dsPIC30F Devices

CMX-MicroNet is an embedded TCP/IP stack that is specifically designed for optimized use of Flash and RAM resources on Microchip's 16-bit Digital Signal Controller. The software runs directly on the processor with no gateways or PCs required. The stack can be run in Stand-alone mode or work in conjunction with an RTOS. Using only industry standard protocols, CMX-MicroNet offers true TCP/IP networking via Direct, Dial-up or Ethernet connectivity and wireless Ethernet (802.11b) as well.

Up to 127 sockets can be open at a time. They can be Ethernet sockets and/or either PPP or SLIP sockets. PPP and SLIP cannot be used at the same time. An HTTP Web server, FTP server, SMTP client and DHCP client are also available. The RS-232 link, if used, can either be a direct cable link or through a modem.

Description

CMX-MicroNet is available for a low, one-time fee with no royalties on deployed products. In addition, CMX-MicroNet offers only industry standard protocols running directly on the target processor and full source code is provided with every sale.

Supported Protocols

TCP	PPP
UDP	SLIP
IP	HTTP Web Server
DHCP	FTP
TFTP	SMTP

CMX-Scheduler™ for dsPIC® DSC Devices

CMX-Scheduler is the result of a special collaboration between CMX and Microchip. Available in object code only, CMX-Scheduler is available for FREE to embedded systems designers using the dsPIC® DSC microcontrollers. CMX-Scheduler is specially designed for developers whose designs do not require a full-blown RTOS and/or who are wondering if a kernel might help their application. The perfect entry-level kernel, CMX-Scheduler is intuitive to use and easy to implement.

CMX-Scheduler offers many growth paths for future designs. User applications developed with the CMX-Scheduler kernel are upwardly compatible with the popular CMX-Tiny+™ or CMX-RTX™ RTOSes. CMX-Scheduler also is tightly integrated with the unique CMX-MicroNet™ TCP/IP stack for those applications that require networking connectivity.

CMX-Scheduler software and documentation is delivered in electronic format and is freely licensed for unlimited product usage on the dsPIC DSC devices.

Features

- FREE for use on any dsPIC DSC device
- Easy to learn and use
- Truly preemptive kernel
- Supports up to five tasks
- Fast performance
- Free bug fixes and updates
- No royalties on shipped products
- Compatible with CMX-Tiny+ and CMX-RTX
- Complete electronic documentation
- Integrated with CMX-MicroNet for optional networking connectivity

CMX-Scheduler Specifications for dsPIC® DSC Products

- All CMX Functions: 972 bytes
- CMX Initialize Module: 153 bytes
- CMX Assembly Module: 567 bytes
- RAM, Each Task Control Block: 11 bytes
- Flash, Each Task Control Block: 5 bytes
    - Min. Context Switch: 81 cycles (starting a task)
    - 102 cycles (resuming a task)
- CMX functions are contained in a library, thus reducing code size, if not referenced.

Functionality

- K_Task_Create – creates a task
- K_Task_Start – starts a task
- K_Task_Wake – wakes a task
- K_Task_Wait – has a task wait with/without a timeout
- K_Task_Kill – Deletes a task
- K_Task_Coop_Sched – performs a cooperative task switch
- K_Event_Wait – waits on an event
- K_Event_Signal – signals an event from a task
- K_Event_Signal – signals an event from an interrupt

CMX-RTX™ for dsPIC30F Devices

In some cases, well-structured linear programming is sufficient for a product. In most cases, however, programmers appreciate not having to worry about structuring their code to perform all necessary tasks in a timely manner. This is where CMX-RTX can help. CMX-RTX allows tasks (pieces of code that do specific duties) to run quasi-concurrently. This means that tasks will seem to run all at the same time – doing many specific jobs simultaneously.

CMX-RTX takes the worry and headaches out of real time programming. The software lets embedded programmers concentrate on the overall application as it takes care of the little details. Finish projects faster and more efficiently with CMX-RTX.

Some RTOS software offers only cooperative scheduling, which means that the running task has to call the scheduler to perform a task switch. Others offer time slicing where each task runs for a certain period of time, at which point a task switch takes place no matter what. Others claim to be fully preemptive, but do not allow any interrupt to cause a preemption. All of these models will fail at one point or another.

CMX-RTX allows a task of higher priority that is able to run (whether starting or resuming) to preempt the lower priority running task. This will cause the scheduler to save the context of the running (lower priority) task and restore the context of the higher priority task so that it is now running. A truly preemptive RTOS allows interrupts to cause an immediate task switch. This means that the interrupts now have the added ability of using the RTOS's functions.

Features

- The smallest footprint
- The fastest context switch times
- The lowest interrupt latency times
- True preemption
- Scheduler and interrupt handler written in Assembly for speed and optimization
- Optional co-operative and time-slicing scheduling
- Nested interrupts
- All functions contained in a library
- Interrupt callable functions
- Scalability
- Free source code provided
- Integrated with CMX-MicroNet™ for optional networking connectivity

CMX-RTX Specifications for dsPIC® DSC Products

Flash

- All CMX Functions: 3696 bytes
- CMX Initialize Module: 936 bytes
- CMX Assembly Module (scheduler): 645 bytes
- RAM, Each Task Control Block: 28 bytes
- Min. Context Switch:
    - 92 cycles (starting a task)
    - 137 cycles (resuming a task)
- CMX functions are contained in a library, thus reducing code size, if not referenced.

CMX-Tiny+™ for dsPIC30F Devices

In some cases, well structured linear programming is sufficient for a product. In most cases, however, programmers appreciate not having to worry about structuring their code to perform all necessary tasks in a timely manner. This is where CMX-Tiny+ can help. CMX-Tiny+ allows tasks (pieces of code that do specific duties) to run quasi-concurrently. This means that tasks will seem to run all at the same time - doing many specific jobs simultaneously.

CMX-Tiny+ takes the worry and headaches out of real time programming. The software lets the embedded programmer concentrate on the overall application while taking care of the little details. Finish projects faster and more efficiently with CMX-Tiny+.

Some RTOS software offers only cooperative scheduling, which means that the running task has to call the scheduler to perform a task switch. Others offer time slicing in which each task runs for a certain period of time, at which point a task switch takes place no matter what. Others claim to be fully preemptive, yet do not allow any interrupt to cause a preemption. All of these models will fail at one point or another.

CMX-Tiny+ allows a task of higher priority that is able to run (whether starting or resuming) to preempt the lower priority running task. This will cause the scheduler to save the context of the running (lower priority) task and restore the context of the higher priority task so that it is now running.

A truly preemptive RTOS allows interrupts to cause an immediate task switch. This means that the interrupts now have the added ability of using the RTOS's functions.

In addition, CMX-Tiny+ has been especially designed to offer such a small Flash/RAM footprint that it can be used with only the on board Flash/RAM of the dsPIC DSC as a single chip solution. Based upon a scaled down version of the popular CMX-RTX™, CMX-Tiny+ retains most of the power of CMX-RTX, as well as the more frequently used functions.

Features

- Extremely small Flash/RAM footprint
- Truly preemptive RTOS
- Low power mode supported
- Full source code with every purchase
- Free technical support and updates
- Low, economical pricing
- No royalties on shipped products
- Backward compatible with CMX-Scheduler™
- Integrated with CMX-MicroNet™ for optional networking connectivity

MPLAB® C18 C Compiler

The MPLAB C18 is a full-featured ANSI-compliant C compiler for the Microchip Technology PIC18CXXX family of PICmicro® MCUs. MPLAB C18 is fully compatible with Microchip's MPLAB IDE, allowing source-level debugging with both the MPLAB ICE and the MPLAB SIM simulator. MPLAB C18 provides a convenient, project-oriented development environment that reduces development time.

MPLAB C18 allows code for the PIC18CXXX family to be written in the high-level C language using powerful PICmicro MCU libraries, enabling the developer to devote more time to the application and less time to the details of the processor.

MPLAB C18 was designed explicitly for the PIC18CXXX family and allows the use of a software stack for maximum RAM reusability.

MPLAB C18 provides user-configurable interrupt support for saving and restoring context during interrupt handling. Libraries are provided for multiple memory models. Libraries, precompiled objects and linker scripts can be included in MPLAB C18 projects, along with C and Assembly source files, for use with MPLAB C18 make and build functions.

The MPLAB C18 ANSI-compliant C compiler comes complete with the MPLAB IDE. The IDE allows you to move quickly between different development and debugging modes. For example, you can quickly advance from software debugging with MPLAB SIM simulator to hardware debugging with MPLAB ICE.

MPLAB C18 has implemented extensions to the C language to provide specific support for Microchip's PICmicro MCU environment.

These C library extensions include:

A/D Converter	Input Capture
SPI™	Timers
I^{2}C™	I/O Port
Reset	External LCD
Software I^{2}C	Software USART
Relay	Memory/String Manipulation
32-bit Math Library	Interrupt Support Macros
USART	Character Classification
Pulse-Width Modulation	Number/Text Conversion
Software SPI	

MPLAB C18 will run on any 486 or better PC, as a native 32-bit Windows® 95 or Windows NT® executable.

Microchip MPLAB® C30 V 1.20   A   B   C   D
(Leading Competitors)
The MPLAB C30 C compiler is a fully ANSI-compliant product with standard libraries for the dsPIC® DSC architecture. It is highly optimizing and takes advantage of many dsPIC DSC architecture-specific features to provide efficient software code generation. MPLAB C30 also provides extensions that allow for excellent support of the hardware, such as interrupts and peripherals. It is fully integrated with the MPLAB IDE for high level, source debugging.

MPLAB C30 comes complete with its own assembler, linker and librarian. These allow the user to write Mixed mode C and Assembly programs and link the resulting object files into a single executable file.

MPLAB C30 is distributed with a complete ANSI C standard library. The library includes functions for string manipulation, dynamic memory allocation, data conversion, timekeeping and math functions (trigonometric, exponential and hyperbolic). The standard I/O functions for file handling are also included, and, as distributed, they support full access to the host file system using the command-line simulator.

The compiler supports both large and small code and data models. The small code model takes advantage of a more efficient form of call instructions, while the small data model supports the use of compact instructions for accessing data in SFR space.

MPLAB C30 includes a powerful command-line driver program. Using the driver program, application programs can be compiled, assembled and linked in a single step.

MPLAB C30 comes complete with its own assembler, linker and librarian. These tools allow the user to write Mixed mode C and Assembly programs and link the resulting object files into a single executable file.

dsPICworks™ Data Analysis and DSP Software

dsPICworks software is an easy-to-use data analysis and signal-processing package for designs using dsPIC30F digital signal controllers. It provides an extensive number of functions encompassing:

- Signal generation
- Arithmetic operations and digital signal processing
- One, two and three dimensional display and measurement capabilities
- Data import/export compatible with MPLAB® IDE and MPLAB ASM30 assembler

Features

- Wide variety of signal generators – Sine, square, triangular, window functions, noise
- Extensive DSP functions – FFT, DCT, filtering, convolution, interpolation
- Extensive arithmetic functions – algebraic expressions, data-scaling, clipping, etc.
- 1-D, 2-D and 3-D displays
- Multiple data quantization and saturation options
- Multi-channel data support
- Automatic "script file"-based execution options available for any user-defined sequence of dsPICworks software functions
- File import/export inter-operable with MPLAB IDE
- Digital filtering options support filters generated by dsPIC Digital Filter Design
- ASM30 assembler file option to export data tables into dsPIC30F RAM

Signal Generation

dsPICworks software supports an extensive set of signal generators including basic sine, square and triangle wave generators as well as advanced generators for window functions, unit step, unit sample, sinc, exponential and noise functions.
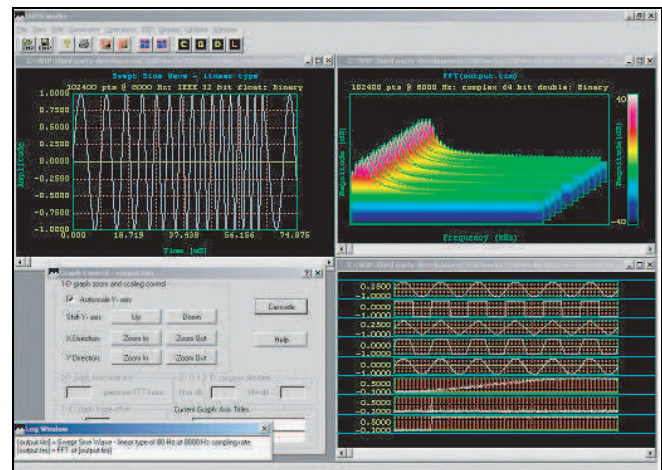

Arithmetic and Digital Signal Processing (DSP) Operations

dsPICworks software has a wide range of DSP and arithmetic functions which can be applied to signals. Standard DSP functions include transform operations – FFT and DCT, convolution and correlation, signal decimation, signal interpolation sample rate conversion and digital filtering.

Display and Measurement

dsPICworks software has a wide variety of display and measurement options. Frequency domain data may be plotted in the form of 2-dimensional "spectrogram" and 3-dimensional "waterfall" options. The log window shows current cursor coordinates, as well as derived values such as difference from last position and signal frequency.

Digital Filter Design

The Digital Filter Design tool for the dsPIC® 16-bit Digital Signal Controllers makes designing, analyzing and implementing Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) digital filters easy through a menu-driven and user-intuitive interface. The filter design tool performs complex mathematical computations for filter design, provides superior graphical displays and generates comprehensive design reports. Desired filter frequency specifications are entered and the tool automatically generates the filter code and coefficient files ready to use in the MPLAB® Integrated Development Environment (IDE). System analysis of the filter transfer function is supported with multiple generated graphs such as: magnitude, phase, group delay, log magnitude, impulse response and pole/zero locations.

Features

Key features of the Digital Filter Design tools include:

Finite Impulse Response Filter Design

- Design method selection
  - FIR Windows® design
  - FIR Equiripple design (Parks-McClellan)
- Low-pass, high-pass, band-pass and band-stop filters
- FIR filters can have up to 513 taps
- Some of the many window functions supported:
  - Rectangular
  - Hanning (Hann)
  - Hamming
  - Triangular
  - Blackman
- Reports show design details such as window coefficients and impulse response prior to multiplying by the window function
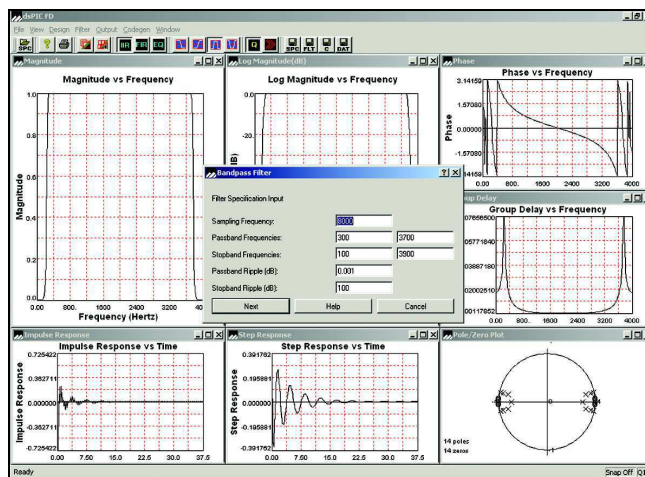

Infinite Impulse Response Filter Design

- Low-pass, high-pass, band-pass and band-stop filters
- Filter orders up to 10 for low-pass and high-pass filters
- Filter orders up to 20 for band-pass and band-stop filters
- Five analog prototype filters available
- Digital transformations are performed by bilinear transformation method
- Reports show design details such as all transformations from normalized low-pass filter to desired filter

Code Generation Features

- Generated files are compliant with the Microchip dsPIC30F C30 Compiler, Assembler and Linker
- Choice of placement of coefficients in program space or data space
- C wrapper/header code generation

FilterLab® Active Filter Software Design Tool
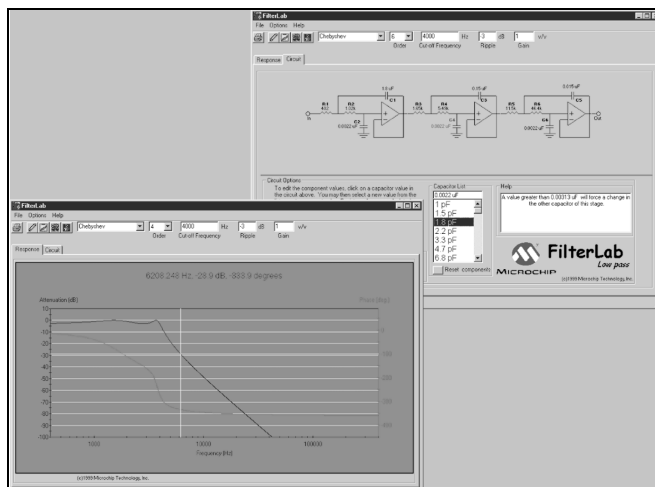

FilterLab is an innovative software tool that simplifies active filter design. The FilterLab active filter software design tool provides full schematic diagrams of the filter circuit with component values and displays the frequency response.

Features

- Multiple filter order and responses with gain option
  - Ability to select Bessel, Butterworth, or Chebyshev filter response
  - Up to 8th-order filters can be simulated
  - Circuit diagram and component values given
- Bode plot with phase margin
  - Resultant Bode plot generated
- Circuit implementation
  - Standard 1-percent resistors
  - Standard capacitor values generate and user adjustable
  - Circuit configuration: Sallen-Key (noninverting) or multiple feedback (inverting)
- Spice model generated
  - Spice model of entire filter generated
  - Allows for streamline of simulations
- Anti-aliasing wizard
  - Filter optimization for analog-to-digital converter based on bit resolution and sample rate.

Total Endurance™ Software Model

Microchip's revolutionary Total Endurance Software Model provides electronic system designers with unprecedented visibility into Serial EEPROM-based applications. This advanced software model (with a very friendly user interface) eliminates time and guesswork from Serial EEPROM-based designs by accurately predicting the device's performance and reliability within a user-defined application environment. Design trade-off analysis, which formerly consumed days or weeks, can now be performed in minutes – with a level of accuracy that delivers a truly robust design.

With Microchip's Total Endurance Software Model, users may input the following application parameters:

- Serial EEPROM device type
- Bytes to be written per cycle
- Cycling mode – byte or page
- Data pattern type – random or worst-case
- Temperature in °C
- Erase/Write cycles per day
- Application lifetime or target PPM level

The model will respond with FIT rate, PPM level, application life and plot of the PPM level versus number of cycles. The model is available in both MS-DOS and Windows® versions.

Features
- Automatic or manual recalculation
- Real-time update of data
- Full-screen or windowed graphical view
- Hypertext on-screen help
- Key or slide-bar entry of parameters
- On-screen editing of parameters
- Single-click copy of plot to clipboard
- Numeric export to delimited text file
- On-disk Total Endurance tutorial

Development Systems Ordering Guide

NOTES:
MPLAB® ICD 2 In-Circuit Debugger

The MPLAB ICD 2 module is a low-cost development tool that connects between the PC and the designers target board allowing direct in-circuit debugging of a PICmicro® target microcontroller. Programs can be executed in real time or single step, watch variables established, break points set, memory read/writes accomplished and more. It can also be used as a development programmer for the microcontrollers.

The MPLAB ICD 2 allows debugging of selected Flash-based Microchip microcontrollers using MPLAB Integrated Development Environment (IDE). This powerful graphical user interface is included with each unit as a free tool. It is the ideal tool for embedded control designers who do not have the budget for a high-cost, in-circuit emulator.

Shared overhead is: one stack level, some general purpose file registers and a small bank of program memory when in the debug mode and two hardware pins (RB6 and RB7) lines.

The MPLAB ICD 2 is firmware-based, which allows it to be enhanced to support future microcontroller products and new features extending the tool life and making it a valued buy. Firmware downloads are available from the Microchip web site at: www.microchip.com.

Features

- USB (full speed 2 Mbits/s) and RS-232 interface to host PC
- Real time background debugging
- Built-in over voltage/short circuit monitor
- Supports low-voltage operation to 2.0 volts
- Diagnostic LED's (power, busy, error)
- Reading/writing memory space and stack of target microcontroller
- Erase of program memory space with verification
- Freeze on halt
- Programs many Flash devices

MPLAB® ICD 2 Accessories

RS-232 and Power Supply Kit

Universal Power Supply and Serial Cable to support using the ICD 2 for serial communications or with the Universal Programmer Module. These items are included with the MPLAB® ICD 2 Evaluation Kit (DV164006) and MPLAB® ICD 2 Module ws (DV164007) products.

Universal Programming Module
The Universal Programming Module is a handy low-cost tool to support programming of DIP packaged products from Microchip.

It can be used in conjunction with the In-Circuit Debugger (MPLAB ICD 2) to provide an easy means for programming microcontrollers.

Seven flying leads break out the primary programming lines needed for any microcontroller. These are connected to the 40 breakout pins of the ZIF socket, allowing any part to be configured to the necessary programming lines.

Features

- ZIF Socket
- Supports up to 40-pin devices from 300 to 600 mil width
- MPLAB ICD 2 Connector

MPLAB ICD 2 Header Interfaces

The header interface provides In-Circuit Debugging capability to the 8-pin, 14-pin or 18-pin devices. The header interface is connected in place of the target device and houses a standard MPLAB ICD 2 connector. In-circuit debugging is done via a MPLAB ICD 2. Once the code is debugged, the debugged software can then be programmed into the device and installed in the board replacing the header.

MPLAB ICD Header Interface

A handy device that plugs into the existing 40-pin DIP socket on the development board where a Flash-based microcontroller would be. It breaks the connection to RB5, RB6 and RB7, which are then connected to the standard MPLAB ICD connector. This provides access for immediate in-circuit debugging without having to accommodate hardware on your board.

EMULATOR SYSTEMS

MICROCHIP

© 2004 Microchip Technology Inc.

Development Systems Ordering Guide

NOTES:
MPLAB® ICE 2000 Modular In-Circuit Emulator

Microchip's universal MPLAB ICE for PICmicro® MCUs has been designed with user requirements in mind. The system is small, portable, lightweight and offers improved performance and value. For quick hook-up to portable or desktop PCs, MPLAB ICE easily connects to the parallel (printer) port.

Interchangeable processor modules allow the system to be easily configured to emulate different processors. This modular system consists of an emulator pod, a processor module, a device adapter, and a transition socket (optional). Also included is Microchip's MPLAB Integrated Development Environment (IDE) featuring MPASM™ macro assembler, MPLAB programmer's editor, symbolic debugger, and project manager with built-in support for high-level languages that support the Common Object Description format (i.e., MPASM assembler, MPLAB C17 and MPLAB C18).

MPLAB ICE 2000 is a premium quality emulator system providing full-speed emulation, low-voltage operation, 32K x 128-bit trace and unlimited breakpoints. Complex triggering of the MPLAB ICE 2000 provides sophisticated trace analysis and precision breakpoints. The trace analyzer captures real-time execution addresses, opcodes and read/writes of external data. It also traces all file-register RAM usage showing internal addresses and data values, as well as all accesses to special-function registers, including I/O, timers and peripherals.

Triggers and breakpoints can be set on single events, multiple events, and sequences of events. The MPLAB ICE 2000 analyzer is fully transparent and does not require halting the processor to view the trace. In addition, MPLAB ICE 2000 supports code-coverage profiling.

Features

- Full-speed, real-time emulation
- Low-voltage emulation: 2.0V to 5.5V
- Trace memory: 32K x 128-bit
- Break/trigger on internal registers
- Program address software breakpoints
- Complex break/trigger on logic: program address and data; internal register address and data; access type; and eight external inputs
- One external input and output logic analyzer trigger
- Multi-level trigger (4 levels)
- Pass and delay counters
- Time stamp
- Programmable clock: 32 kHz to 40 MHz
- Logic probes
- Parallel (printer) port communicatons
- Code-coverage profiling

MPLAB ICE 2000 In-Circuit Emulator Contents
• MPLAB ICE 2000 with Tripod
• MPLAB IDE Software and Documentation CD

MPLAB® ICE 4000 Modular In-Circuit Emulator

The MPLAB ICE 4000 in-circuit emulator is intended to provide the product development engineer with a complete microcontroller design tool set for high-end PICmicro® microcontrollers. Software control of the emulator is provided by the MPLAB Integrated Development Environment, which allows editing, building, downloading, and source debugging from a single environment.

The MPLAB ICE 4000 is a premium emulator system providing the features of MPLAB ICE 2000, but with increased emulation memory and high-speed performance for dsPIC30F and PIC18XXXX devices. Its advanced emulator features include complex triggering and timing, up to 2 MB of emulation memory, and the ability to view variables in real time.

The MPLAB ICE 4000 in-circuit emulator system has been designed as a real-time emulation system with advanced features that are typically found on more expensive development tools. The PC platform and Microsoft® Windows® 32-bit operating system were chosen to best make these features available in a simple, unified application.

Features

- Full-speed emulation
- Low-voltage emulation down to 1.8 volts (or device limit)
- 64K deep x 216-bit wide trace memory
- Up to 2 MB of addressable memory
- Unlimited breakpoints
- Complex break, trace and trigger logic
- Multi-level trigger up to 4 levels
- 48-bit time stamp
- Stopwatch
- External inputs
- External output to sync with other instrumentation
- USB port and parallel port* connection to PC

*Feature to be available later with software upgrade

MPLAB® ICE 2000/4000 Replacement Accessories

Device Adapter Plugs

Device adapter plugs are available as replacement accessories. The table below lists the replacement part number.

Model Part Number	Description
ACICE0201	MPLAB ICE 8P 300 mil adapter plug
ACICE0202	MPLAB ICE 18P 300 mil adapter plug
ACICE0203	MPLAB ICE 20P 300 mil adapter plug
ACICE0204	MPLAB ICE 28P 300 mil adapter plug
ACICE0205	MPLAB ICE 28P 600 mil adapter plug
ACICE0206	MPLAB ICE 40P 600 mil adapter plug
ACICE0207	MPLAB ICE 14P 300 mil adapter plug

Transition Headers

Transition socket headers can be purchased separately in the event that a customer needs additional headers. The table below lists the headers available.

Model Part Number	Description
ACICE0301	8P SOIC Header
ACICE0302	14P SOIC Header
ACICE0303	18P SOIC Header
ACICE0304	20P SSOP Header
ACICE0305	20P SOIC Header
ACICE0306	28P SOIC Header
ACICE0307	28P SSOP Header

MPLAB ICE 2000 Replacement Accessories

Model Part Number	Description
ACICE0103	MPLAB ICE 2000 Power Supply
ACICE0104	MPLAB ICE 2000 Logic Probes
ACICE0105	MPLAB ICE 2000 Parallel Cable
ACICE0106	MPLAB ICE Tripod
ACICE0107	MPLAB ICE 2000 Flex Cable

MPLAB ICE 4000 Replacement Accessories

Model Part Number	Description
ACICE0401	MPLAB ICE 4000 Power Supply
ACICE0402	MPLAB ICE 4000 Logic Probes
ACICE0403	MPLAB ICE 4000 Slim Parallel Cable
ACICE0106	MPLAB ICE Tripod
ACICE0407	MPLAB ICE 4000 Flex Cable

Extra logic-probe hooks can be purchased from:

E-Z-Hook: (800) 995-HOOK

Part Number: XM25

Description: Micro Hook Adapter with 0.025 square pin

Ordering Information

MPLAB® ICE 2000 and MPLAB® ICE 4000 Emulator Systems

How To Order MPLAB ICE

MPLAB ICE is easy to order, using these three steps.

1. Determine the PICmicro® MCU device needed.
2. Identify the PICmicro MCU package needed.
3. Locate the correct MPLAB ICE component part numbers from the *Development Tools Cross Reference* section on pages 95-122.

A Complete MPLAB ICE System

MPLAB ICE is a modular emulator system with interchangeable components allowing the system to be easily configured to emulate different PICmicro MCUs. Since this emulator supports package-specific emulation, customers need to know which device and package they intend to emulate. The customer can then use the *Development Tools Cross Reference* Parts List on the following pages to identify the part numbers required to complete an MPLAB ICE system. A complete system consists of:

1. An emulator pod (including among other things, the host-to-pod parallel cable and power supply)
2. A processor module
3. A device adapter
4. A transition socket

MPLAB® ICE 2000 Emulator

MPLAB® ICE 4000 Emulator
An MPLAB ICE emulator system is ordered as separate components. Knowing the terms will make it easy to order and use the MPLAB ICE emulator system. Read more about each component.

Emulator Pod

The MPLAB ICE 2000 and MPLAB ICE 4000 are full-featured emulator pods containing a main board with an additional board for expanded trace memory and complex control logic. The pods come with a standard parallel interface cable that connects the pods to the parallel port of the PC and a power supply. MPLAB ICE 4000 also includes a USB interface cable that connects the pod to the USB port.

Processor Module

The processor module is a PICmicro MCU, device-specific module that is inserted into the emulator pod. The processor module contains the emulator chip, logic and low-voltage circuitry. A flex cable extends from the processor module and is connected to the device adapter at the target application.

Device Adapter

The device adapter provides a common interface for the PICmicro MCU being emulated. This adapter contains a special device that provides an oscillator clock allowing the user to accurately emulate the RC characteristics of the PICmicro MCU. The device adapter provides emulation support for standard DIP and PLCC styles. For emulation support of other packages, a transition socket is needed along with the device adapter.

Transition Socket

The transition sockets are available in various styles to allow the common device adapter to be translated to support surface-mount packages, such as SOIC, SSOP, PQFP, TQFP and MLF.

NOTES:
PICSTART® Plus Low-Cost Development Kit
The PICSTART Plus programmer gives the product developer the ability to program user software into any of the supported microcontrollers. The PICSTART Plus software running under MPLAB® IDE provides for full interactive control over the programmer.

The PICSTART Plus programmer provides the product development engineer with a highly-flexible, low-cost design tool set for all PICmicro® MCUs (DIP packages up to 40 pins). PLCC and QFN adapters are available.

The CE-compliant PICSTART Plus development programmer features a molded plastic enclosure and special circuit design techniques to enhance ESD protection. PICSTART Plus is a development programmer and is not recommended for use in a production environment.

Sample software programs are provided to help the developer quickly become familiar with the PICSTART Plus development system and with Microchip's PICmicro MCU families. Included is a limited C compiler (PICC LITE™ C Compiler) for the PIC16F84 family.

The MPASM™ macro assembler provides programmable memory data files, listing files and special files required for symbolic debug. The MPLAB SIM software simulator allows the user to isolate code problems and debug firmware designs on PICmicro MCUs. It simulates the core functions, as well as most of the peripherals of the PICmicro MCU families. It is particularly suitable for optimizing algorithms where real-time emulation is not required.

The PICSTART Plus development system runs on any PC-compatible machine under Windows® 98 SE or later operating system. The easy-to-use PICSTART Plus software provides for full interactive control over the programmer and features Microchip's highly acclaimed MPLAB IDE, with its built-in editor, assembler and Windows based MPLAB SIM simulator.

PICSTART Plus Flash Re-Programmable Firmware Upgrade

This PICSTART Plus Upgrade is a PCB containing a PIC18F6720 part and replaces the PIC17C44 inside a PICSTART Plus. The firmware is upgradable using MPLAB IDE. It is no longer necessary to program a PIC17C44 and open the product enclosure to replace the PICSTART Plus firmware.

PICkit™ 1 Flash Starter Kit
The PICkit 1 Flash Starter Kit is a low-cost development kit with an easy-to-use interface for programming Microchip's 8/14-pin Flash family of microcontrollers. This starter kit is designed to help the user get up to speed quickly using PICmicro® microcontrollers.

The kit provides everything needed to program, evaluate and develop applications using Microchip's powerful 8/14-pin Flash family of microcontrollers. Instructions are provided in a series of seven tutorials that cover I/O, interrupts, A/D converters, comparators, data tables and timers. All source code files for the tutorials are furnished.

Code development and debugging is performed using Microchip's powerful MPLAB® Integrated Development Environment (IDE). The MPLAB IDE is a seamless, integrated software development environment that includes a MPASM™ macro assembler, MPLAB SIM software simulator with symbolic debugger, color-coded source editor, project manager with high-level language debugging and concurrent support for development tools, including low-cost, in-circuit debuggers, full-featured real-time emulators and programmers. The consistent and easy-to-use graphic user interface of the MPLAB IDE desktop allows for rapid switching between development, debugging and programming modes within a project.

Features

- Small 3" x 4.5" circuit board with snap-off prototyping board
- Easy-to-use Windows® programming interface for programming Microchip's 8/14 pin Flash family of microcontrollers
- Seven sequential tutorials written in both Assembly and HI-TECH C demonstrate how to use Microchip's 8/14 pin Flash family of microcontrollers
- Microchip's Tips 'n Tricks booklet provides efficient, low-cost design techniques using Microchip Flash microcontrollers
- PICkit 1 User's Guide (included on CD)
- Microchip's MPLAB IDE software for a complete code development environment
- HI-TECH PICC LITE™ C Compiler (contained on the MPLAB CD)

PICkit 1 Flash Starter Kit Contents

rfPIC™ Development Kit 1

The rfPIC Development Kit provides design engineers with an easy way to evaluate uni-directional remote sense and control wireless links based on the rfPIC12F675 and rfRXD0420/0920 devices. The kit is based on the popular PICkit™ 1 Flash Starter Kit and consists of modular building blocks for different transmitters and receivers that can be utilized for prototype systems or to evaluate different options using Microchip products.

The receiver modules are based on the rfRXD0420 and rfRXD0920 devices and are available in two options supporting 315 MHz ASK and 433 MHz ASK. These modules plug directly into the PICkit 1 development board offering an easy way to evaluate the different receiver modules with Microchip's 8- and 14-pin Flash PIC® microcontrollers, as well as a USB interface to a PC. The modules are also available for sale separately to allow a number of prototypes based on the same module without having to do an actual RF design. The design files for these modules are available to allow easy integration of the designs into a system.

The transmitter modules are based on the rfPIC12F675 devices and support the same frequency and modulation formats as the receivers. The transmitter modules feature button inputs for remote control functions, as well as analog input to allow evaluation of the A/D and comparator peripherals on the rfPIC12F675. Code development is achieved with Microchip's MPLAB® Integrated Development Environment (IDE). The microcontroller is easily programmed using the PICkit 1, with modules plugging into the PICkit 1 in a similar manner as the receiver modules.

In-Circuit Serial Programming™ (ICSP™) Socket for PRO MATE® II

Microchip offers an ICSP kit that can be used with PRO MATE II, Microchip's universal device programmer. Together, these two tools allow you to implement ICSP with minimal effort and use the ICSP capability of Microchip's PICmicro® MCUs.

In-System Programming is a technique where a programmable device is programmed after the device is placed in a circuit board. ICSP is an enhanced ISP technique implemented in Microchip's PICmicro OTP and Flash MCUs. Using only two I/O pins to serially input and output data makes ICSP easy-to-use and less intrusive on the normal operation of the MCU.

The In-Circuit Serial Programming Socket module is a complete kit including connectors, cables, and required interface boards to allow a development engineer to implement ICSP with PRO MATE II.

MPLAB® PM3 Universal Device Programmer

The MPLAB PM3 Universal Device Programmer is easy-to-use and operates with a PC or as a stand-alone unit, and programs Microchip's entire line of PICmicro® devices, as well as the latest dsPIC30F DSC devices. The MPLAB PM3 features a large and bright LCD unit (128x64 pixels) to display easy menus, programming statistics and status information.

The MPLAB PM3 programmer has exceptional programming speed to allow high production throughput, especially important for large memory devices, and includes a Secure Digital/Multimedia Card slot for easy and secure data storage and transfer.

The MPLAB PM3 programmer is designed with 40 programmable socket pins, allowing each socket module to be configured to support many different devices, requiring fewer socket modules to support the entire line of Microchip parts. The socket modules use multi-pin connectors for high reliability and quick interchange. An adapter allows current PRO MATE® II socket modules to be used on the MPLAB PM3 programmer.

When connected to a PC-host system either via a serial or USB port, the MPLAB PM3 programmer is seamlessly integrated with the MPLAB Integrated Development Environment (IDE) providing an exceptionally user-friendly interface for the ultimate control during programming. The MPLAB IDE includes a full-featured macro assembler, powerful software simulator with symbolic debugger, color-coded programmer's editor, project manager, high-level language debugging and support for Microchip and selected third party development tools, including compilers, low-cost in-circuit debuggers and full-featured in-circuit emulators.

Features

- RS-232 or USB interface
- Integrated In Circuit Serial Programming™ (ICSP™) interface
- Fast programming time
- Three operating modes:
  - PC Host mode for full control
  - Safe mode for secure data
  - Standalone mode for programming without a PC
- Complete line of interchangeable socket modules to support all Microchip devices and package options (sold separately)
- SQTP℠ serialization for programming unique serial numbers while in PC Host mode.
- An alternate DOS command line interface is available for batch control
- Supports PRO MATE II socket modules via adapter (sold separately)
- Large easy-to-read display
- Field upgradeable firmware allows quick new device support
- Secure Digital (SD) and Multimedia Card (MMC) external memory support
- Buzzer notification for noisy environments

PICmicro® DEMO BOARDS

Development Systems Ordering Guide

NOTES:

PICDEM™ Demonstration Boards

The PICDEM demonstration boards, PICDEM 1, PICDEM 3, PICDEM 14A and PICDEM 17 are simple boards which demonstrate the capabilities of Microchip PICmicro® MCU families. See *Development Tools Cross Reference*, for specific device support for each board.

All necessary hardware is included to run basic demonstration programs, which are supplied on a 3.5-inch disk or CD. The users can program the samples provided with the PICDEM demonstration board on a PRO MATE® II or PICSTART® Plus Programmer and easily debug/test the sample code, or the user can connect the PICDEM demonstration board to the MPLAB® ICE and download the sample code to the emulator and debug/test the code. Additionally, a generous prototype area is available for user hardware.

PICDEM Demonstration Boards Contents
• PICDEM Demonstration Board (1, 3, 14A or 17 as applicable)
• Product Samples
• Demo/Tutorial Software (PICDEM 3 is written in C using the MPLAB C demonstration version)
• Complete Documentation

Ordering Information:

DM163003	PICDEM 3 Demonstration Board
DM143001	PICDEM 14A Demonstration Board
DM173001	PICDEM 17 Demonstration Board
PICDEM™ 2 Plus Demonstration Board
The PICDEM 2 Plus is a powerful, low-cost learning and demonstration board. The board comes with an active program loaded on the installed PIC18F452 microcontroller that provides real time clock and local temperature display. The code to accomplish all these program features is provided unassembled so the user can understand and dissect the programming algorithm helping them to quickly learn. The user can then take advantage of the Flash-based microcontroller and its in-circuit debugger capability by cutting, pasting, rewriting or adding to the program to make their own modification (an MPLAB® ICD is required to do this). All of the microcontroller port pins are terminated at a connector header and space is provided in the generous prototyping area for project development work.

Features

- 2 x 16 LCD display
- Piezo sounder driven by PWM signal
- Active RS-232 port
- On-board temperature sensor
- Sample PIC16F877 and PIC18F452 Flash microcontrollers
- MPLAB ICD connector
- Generous prototyping area

PICDEM 2 Plus Demonstration Board Contents

- PICDEM 2 Plus Demonstration Board

Ordering Information:

DM163022   PICDEM™ 2 Plus Demonstration Board
PICDEM™ 4 Demonstration Board
The PICDEM 4 Demonstration Board supports Microchip's low pin-count PICmicro® Flash microcontrollers, including the PIC16F and PIC18F families featuring nanoWatt Technology. NanoWatt Technology refers to Microchip's advanced PMOS Electrically Erasable Cell (PEEC) process technology, circuit design, manufacturing and application techniques.

The PICDEM 4 Demonstration Board can be used to evaluate and demonstrate the capabilities of Microchip's 8-, 14- and 18-pin PIC12F, PIC16F and PIC18F microcontrollers. The demonstration board showcases many features of low pin-count parts, including Local Interconnect Network (LIN) and motor control features using the enhanced capture/compare/PWM module (ECCP). Low-power operation is achieved with a super-capacitor circuit and jumpers allowing the on-board hardware to be disabled to eliminate current draw in this mode.

Tutorial firmware and samples of a PIC16F and PIC18F Flash microcontroller are included to assist the user in becoming familiar with the PICDEM 4 Demonstration Board and to demonstrate the unique features of the supported devices.

By connecting the PICDEM 4 Demonstration Board to the MPLAB® ICD 2, a designer can develop, simulate, debug and download code to the microcontroller using Microchip's powerful graphical MPLAB Interactive Development Environment (IDE). MPLAB IDE is a seamless, integrated software development environment that includes a MPASM™ macro assembler, MPLAB SIM software simulator with symbolic debugger, color-coded source editor, project manager with high-level language

debugging and concurrent support for development tools, including low-cost in-circuit debuggers, full-featured real-time emulators and programmers. The consistent and easy-to-use graphic user interface of the MPLAB IDE desktop allows for rapid switching between development, debugging and programming modes within a project. The MPLAB ICD 2 (DV164007) is available separately. Microchip's MPLAB IDE software can be downloaded free-of-charge from the Microchip web site.

Features

- RS-232 interface
- 2 x 16 liquid crystal display
- In-Circuit Debugger (ICD) connector for programming via In-Circuit Serial Programming™ (ICSP™) technology or developing with the MPLAB ICD 2
- Eight (8) LEDs, four (4) potentiometers, three (3) push buttons
- PCB footprints for an EEPROM, H-Bridge motor driver and LIN transceiver
- Support for crystal, RC or canned oscillator modes.
- Support for either 9-volt power adapter or battery, or hooks for a 5-volt, 100 mA regulated DC supply
- Generous prototyping area and header for expansion

PICDEM™ 18R Demonstration Kit

This kit demonstrates the power and flexibility of Microchip's new ROMless PIC18C601/801 microcontrollers and will significantly speed-up development time for integrating these parts into an end product. The ROMless demonstration board will allow several alternative types of memory to be evaluated with PICmicro® MCUs. It includes an MPLAB® ICD connector interface for the MPLAB ICD 2 In-Circuit Debugging Module, which allows low-cost debugging.

PICDEM 18R Demonstration Kit Contents
• PICDEM 18R Demonstration Board
• Product Samples
• CD
• Serial Cable
• Power Supply
• Documentation

Features

- Support for 68-pin PLCC PIC18C601 and 84-pin PLCC PIC18C801 devices
- 8-bit multiplexed (PIC18C601) and de-multiplexed (PIC18C801) memory interfaces
- 16-bit Word Select mode and Byte Select mode memory interfaces
- 2 MB x 8, 1 MB x 16 JEDEC compliant Flash memory
- 128 KB x 8 SRAM, 64 KB x 16 JEDEC compliant SRAM memory support for PC downloadable executable code into SRAM
- Start execution on-the-fly, general purpose, user configurable, PC downloadable external memory programmer host software
- Eight memory-mapped LED outputs
- Two push-button switches
- One analog potentiometer input; 64KB I^{2}C™ EEPROM and a 4-bit LCD connector

PICDEM™ MC Development Board
The PICDEM MC development board provides designers a quick method to evaluate and develop both AC and DC motor control applications utilizing Microchip's family of 28- and 40-pin enhanced microcontrollers. The development tool is ideal for beginning motor control designers, as well as those new to the PIC18F2331/2431/4331/4431 family of motor control devices.

The development board provides a complete solution for prototyping motor control applications. Both brushless DC motors (BLDC) and AC Induction Motors (ACIMs) can be driven by the board and directly controlled through a simple hardware interface provided on the board itself. The board can also be configured in numerous ways, using jumpers and component selection to control a range of motor control designs, and can accommodate both AC and DC power inputs. With complete isolation between the control circuitry and power circuitry, users can safely plug-in the MPLAB® In-Circuit Emulator (ICE) or MPLAB In-Circuit Debugger (ICD) while high power is connected.

Finally, users can develop their application with a simple graphical interface, known as the Motor Control Graphical User Interface (MC-GUI). The MC-GUI provides a quick and easy way for designers to configure and monitor their motor system parameters, such as motor type, motor speed, rotational direction, current, voltage, heat sink temperature and fault status.

Features

- Two sockets supporting 28- and 40-pin DIP devices
- Motor terminal strip
- 3-phase inverter power module
- Motion sensor inputs
- Speed control potentiometer
- Active RS-232 port
- Full automatic protection of power circuits
- Electrical isolation from power circuits
- MPLAB ICD connector
- FREE motor control GUI software

PICDEM MC Development Board Contents
• PICDEM MC Development Board with a pre-programmed (BLDC firmware) PIC18F4431 Device • A 28-pin, PIC18F2431 Microcontroller • RS-232 Cable • Software and Documentation CD containing the MC-GUI, User's Guide and other supporting documents

PIC18FXX20 64/80L TQFP Demonstration Board
The low-cost PIC18FXX20 64/80L TQFP Demonstration Board is designed for evaluation of Microchip's high pin-count PIC18F Flash microcontrollers. Fully functional right out of the box, the tool demonstrates the digital and analog peripherals of the PIC18FXX20 MCUs and allows for rapid and easy prototyping without the need to design a printed circuit board to support the included PIC18F8720 Flash microcontroller.

The PIC18FXX20 demonstration board offers digital features that include an RS-232 Serial Port, MPLAB® ICD connection, 8 x LED for diagnostic tests, crystal clock circuit (RC option) and reset and user buttons. Analog features include potentiometer input to an Analog-to-Digital Converter (ADC) input channel and a sample of Microchip's TC74 temperature sensor. Outfitted with a PIC18F8720 Flash microcontroller, the demonstration board also complements Microchip's MPLAB In-Circuit Debugger (ICD) 2 tool. The MPLAB ICD 2 (shown in photo) is available separately.

Features

- PIC18F8720 – 80-pin TQFP unit mounted
- 5V regulated power supply circuit
- Clock circuit (20 MHz crystal, RC option available)
- RS-232 connection
- MPLAB ICD connector
- Pin break-out for easy probe access and prototyping
- 8 LED (with disconnect jumper)
- RB0 push button (for bootloader operation)
- Potentiometer (ADC demo)
- Temperature sensor demo (Microchip TC74 part)
- Reset circuit with push button

Development Systems Ordering Guide
PICDEM™ CAN-LIN Demonstration Boards
Microchip offers three similar PICDEM CAN-LIN demonstration boards to support different PICmicro® devices. All demonstrate the main features of the devices, especially those features of the integrated CAN module. In addition to the CAN network, the board also employs a LIN sub-network using Microchip's PIC16C43X and PIC18F320 device families.

Each PICDEM CAN-LIN demonstration board includes both firmware and PC software for simulating a CAN network. The firmware comes pre-programmed on the sample device. The PC software and documentation are furnished on a CD-ROM.

Features

PICDEM CAN-LIN 1 supports:

- 68-pin PLCC PIC18C658 and 84-pin PLCC PIC18C858 devices
- 20-pin PDIP PIC16C432 with integrated LIN bus transceiver

PICDEM CAN-LIN 2 supports:

- 28-pin SDIP PIC18F258 and 40-pin PDIP PIC18F458 devices
- 20-pin PDIP PIC16C432 with integrated LIN bus transceiver

PICDEM CAN-LIN 3 supports:

- 64-pin TQFP PIC18F6680 and 80-pin TQFP PIC18F8680 devices
- 20-pin SSOP PIC18F1320 and MCP201 LIN bus transceiver

The kits all share the following common features:

- On-board digital and analog +5V regulator for direct input from 12V AC/DC wall adapter
- Two on-board CAN nodes and optional external CAN bus connectors
- On-board LIN bus master and slave node
- Optional external LIN bus connector
- DB-9 RS-232 interface to IBM compatible PC
- Two optional ICSP™ MPLAB® ICD 2 connectors
- Optional header for LCD panel
- CAN bus monitoring software for PC
- Devices preprogrammed with CAN bus monitoring firmware
- Generous prototyping area

PICDEM™ LIN Demonstration Kit

The PICDEM LIN board demonstrates the capabilities of several Microchip microcontrollers using the LIN bus protocol. It supports slave node applications with PIC16C432, PIC16C433, PIC16C7XX and master node applications with PIC16X8X and PIC18FXX8. PIC16C432 and PIC16C433 have on-board LIN transceivers according to LIN bus specification V1.2.

This kit can be used to develop LIN hardware and software modules; demonstrate the LIN protocol in simple distribution network; evaluate the PIC16C432 LIN transceiver device; and quickly learn LIN bus interface. Integrate/interface LIN bus into product for proof-of-concept demonstration.

Features

- 18-, 28- and 40-pin DIP sockets (Although three sockets are provided, only one device may be used at a time.)
- On-board +12V regulator for direct input from 12V
- RS-232C socket and associated hardware for direct connection to RS-232C interface
- CAN bus interface
- Control panel interface for LIN bus master
- RF stage for keyless entry function
- Seat memory unit
- Motor control slave unit

PICDEM LIN Demonstration Kit Contents
• PICDEM LIN Demonstration Boards (2)
• PIC16F874 – used as master in the LIN communication
• PIC16C432, PIC16C433 – used as slaves in LIN communication. Both have on-board LIN transceiver
• Serial Cable
• *PICDEM™ LIN Demonstration Board User's Guide*

PICDEM.net™ Demonstration/Evaluation Board

The PICDEM.net demonstration board is an Internet/Ethernet demonstration board using the PIC18F452 microcontroller and TCP/IP firmware. It connects the PICmicro® MCU to the local area network (LAN). It is a complete kit that is easy-to-use (a PC is required for set up). Interconnection to a network can be accomplished in less than one hour.

The board conforms to the standard 40-pin pinout used by the PIC16F877 or PIC18F452. The firmware used for the network interface was developed by Jeremy Bentham of Iosoft Ltd. based on his book *TCP/IP Lean: Web Servers for Embedded Systems* (ISBN: 1-929629-11-7).

The PICDEM.net board is also equipped with a 6-pin modular connector to interface directly with the Microchip MPLAB® ICD 2 In-Circuit Debugger. With the addition of the MPLAB ICD 2 (sold separately), the developer can modify the on-board PICmicro microcontroller to meet the specific needs.

A generous breadboarding area is also available for experimental circuits or to add an embedded modem for dial-up capability if desired. It includes several status indicators including a 16 x 2 LCD indicator.

PICDEM.net Demonstration/Evaluation Board Contents
• PICDEM.net Demonstration Board with Firmware and PIC18F452 Microcontroller • CAT 5 Ethernet Cable • DB9 Serial Cable • Universal Power Supply • Software Demo and PICDEM.net User's Guide on CD • Textbook – *TCP/IP Lean: Web Servers for Embedded Systems* (optional)

Signal Analysis PICtail™ Daughter Board
The Signal Analysis PICtail™ Daughter Board works as an extension to the PICkit™ 1 Flash Starter Kit. When combined with PICkit 1 version 2.0.0 or later firmware and signal analysis PC program, the Signal Analysis PICtail Daughter Board can perform signal analysis capabilities such as:

• Real Time Strip Chart
• Oscilloscope
• Fast Fourier Transformation (FFT)
• Histogram
• Programming

The Signal Analysis PICtail Daughter Board comes populated with a PIC16F684 MCU and two 25LC640 SPI compatible serial EEPROM memory devices.

Signal Analysis PICtail™ Daughter Board Kit Contents
• Signal Analysis PICtail Daughter Board Printed Circuit Board (PCB)

• PICkit 1 Flash Starter Kit CD-ROM Version 2.0 (or later) (DS40049)
Includes complete information on the Signal Analysis PICtail Daughter Board including:
  - Signal Analysis PICtail Daughter Board User's Guide
  - Signal Analysis PC program
  - Lesson project source and object code

• Pre-programmed PIC16C745 PICmicro® device with USB Version 2.0.0 (or later)

Development Systems Ordering Guide

NOTES:

dsPICDEM™ Starter Demonstration Board

The low-cost dsPICDEM™ Starter Demo Kit allows the user to easily validate a development tool setup using the dsPIC30F. It has a power supply regulator, crystal oscillator, MPLAB® ICD header, serial port, LEDs, push-buttons, potentiometer, and a prototyping area. In addition, all pins on the dsPIC® DSC device are brought out to a terminal block for access.

The dsPICDEM starter board is delivered with a demo application that uses the digital potentiometer to generate audio tones. This output can be connected into the 12-bit ADC for measurement.

dsPICDEM Starter Demonstration Board Contents
• dsPICDEM Starter Demonstration Board • Documentation

Features

- 5V power supply split at the regulator to provide a separate, de-coupled analog supply voltage useful in designs taking advantage of the 12-bit A/D converter.
- Analog peripherals including an MCP41010 digital potentiometer used as a DAC to generate signals, and a MCP6022 to provide output filtering for the DAC and an input filter for the 12-bit A/D. The filter cutoff frequencies are set to 4 kHz to allow telephone-quality signals.

dsPICDEM™ 28-Pin Starter Demonstration Board
The low-cost dsPICDEM 28-pin Starter Demonstration Board allows the user to easily validate a development tool setup using a 28-pin SDIP or SOIC dsPIC30F device. The demonstration board has a socketed dsPIC30F2010 digital signal controller, power supply regulator, crystal oscillator, MPLAB® ICD header, serial port, power on indicator, Reset push button, 28L SOIC layout pad and a prototyping area.

Features

- dsPIC30F2010 28-pin SDIP sample device and socket
- Power input from 9V supply
- Connector for MPLAB ICD 2 In-Circuit Debugger
- RS-232 interface
- Header for access to all device I/O pins
- Layout pad for 28-pin SOIC device
- Prototyping area
- Power-on demo program demonstrating interrupts, device I/O and UART communication
- A tutorial program in Assembly code showing the user how to set up a project in MPLAB IDE

dsPICDEM™ 1.1 General Purpose Development Board
The dsPIC30F general purpose development board provides the application designer with a low-cost development tool to become familiar with the dsPIC30F 16-bit architecture, high performance peripherals and powerful instruction set.

The board features an active demonstration program loaded on the installed dsPIC30F6014 device. Several program functions are selectable via a menu system displayed on the LCD. These include: temperature and voltage measurements, frequency domain characteristics of a sinewave signal generated on-board from a digital potentiometer, FIR and IIR digital filter selections and DTMF tone generation using the codec interface peripheral (external speaker required).

Also included is a simple tutorial written in Assembly language. Users can create a project, assemble and link the code, program and/or debug the code using Microchip's MPLAB® IDE (Integrated Development Environment) – included free, and an MPLAB ICD 2 In-Circuit Debugger – available separately.

The development board serves as an ideal prototyping tool to quickly develop and validate key design requirements.

Features

- dsPIC30F6014 MCU plug-in sample
- Serial communication channels interface (two UARTS, SPI™, CAN, RS-485)
- Si3000 codec with line in/out jacks
- General purpose prototyping area with expansion header
- 122 x 32 dot addressable LCD
- MPLAB ICD 2 and MPLAB ICE 4000 emulator support
- LED's, switches and potentiometers
- Temperature sensor
- Separate digital and analog voltage regulators
- Digital potentiometer for DAC capability

dsPICDEM™ MC1 Motor Control Development Board
The motor control development board provides the application developer with three main components for quick prototyping and validation of BLDC, PMAC and ACIM applications. The three main components are: dsPIC30F Motor Control main board, 3-phase low-voltage power module and 3-phase high-voltage power module

The main control board contains the dsPIC30F6010 but supports all dsPIC® DSC motor control variances, various peripheral interfaces and a custom interface header system, which allows different motor power modules to be connected to the PCB. The control board also has connectors for mechanical position sensors, such as incremental rotary encoders and hall effect sensors, and a breadboard area for custom circuits. The main control board receives its power from a standard plug-in transformer.

The low-voltage power module is optimized for 3-phase motor applications that require a DC bus voltage less than 50 volts and can deliver up to 400W power output. The 3-phase low-voltage power module is intended to power BLDC and PMAC motors.

The high-voltage power module is optimized for 3-phase motor applications that require DC bus voltages up to 400 volts and can deliver up to 1 kW power output. The high-voltage module has an active power factor correction circuit that is controlled by the dsPIC30F device. This power module is intended for AC induction motor and power inverter applications that operate directly from the AC line voltage.

Features

- dsPIC30F6010 motor control MCU based board
- 3-phase low-voltage power module (optional)
- 3-phase high-voltage power module (optional)
- Heatsink for ambient cooling of power sections
- Full automatic protection of power circuits
- Electrical isolation from power circuits
- Many options for motor feedback signals

dsPICDEM.net™ 1 and dsPICDEM.net™ 2 Connectivity Development Boards
The dsPICDEM.net 1 and dsPICDEM.net 2 connectivity development boards provide the application developer a basic platform for developing and evaluating both connectivity and non-connectivity based requirements. The dsPICDEM.net board provides the hardware circuitry for supporting both the Public Switched Telephone Network (PSTN) and 10-Base T MAC/PHY interfaces. The PSTN interface hardware on the dsPICDEM.net 1 board is suited for FCC/JATE compliancy. CTR-21 compliancy is supported on dsPICDEM.net 2.

The board comes with an ITU-T compliant V.22bis/V.22 modem demonstration module pre-programmed on the installed dsPIC30F6014 device. This demo, provided with full source code, enables the user to connect and transfer data between the dsPIC™ Soft Modem and an ITU-T compliant reference modem. The modem can be configured for either the Originate or Answer mode of operation. Configuration and control of the dsPIC SM demo is supported with an optimized AT command set which is entered into a suitable communication program running on the PC, such as HyperTerminal, and communicated to the dsPIC® DSC device over a RS-232 serial channel.

Also included are the CMX-MicroNet WEB and FTP Server programs, which demonstrate two TCP/IP protocol-based applications over the 10-Base T Ethernet Datalink layer.

Features

- dsPIC30F6014 plug-in sample
- 10-Base T ethernet MAC and PHY interface
- PSTN interface with DAA/AFE chipset
- Serial communication channels interface (UART and CAN)
- External I^{2}C™ EEPROM memory for storing constants
- External 64K x 16 SRAM memory
- General purpose prototyping area with expansion header
- Dual channel digital potentiometer
- 2 x 16 LCD display
- MPLAB® ICD 2 and MPLAB ICE 4000 emulator support
- LED's, switches and potentiometers
- Temperature sensor

ANALOG & MIXED SIGNAL EVALUATION KITS

Development Systems Ordering Guide

NOTES:

PICDEM™ MSC1 Demonstration Kit
The PICDEM MSC1 with its PC-based Graphical User Interface (GUI) software serves as a demonstration board for the PIC16C781/782 microcontrollers. The user can configure the PIC16C781/782 from the easy-to-use PC software and download it to the microcontroller to evaluate the various peripherals and interconnect configurations. The GUI gives instant access to the PIC16C781/782 peripherals allowing on-the-fly configuration changes by means of an RS-232 link between the PC and evaluation board.

Initialization Assembly code corresponding to the selected configuration can be built using the supplied Code Generator. Developers can use the code generation to perform an entire configuration using the evaluation tool and save it as a disk file.

Features

- Demonstrate all the PIC16C781/782 peripherals
- Large breadboard area
- Easy-to-use PC-based GUI for:
    - Configuration of peripheral blocks
    - Download configuration to hardware
    - Save configuration setup and import into MPLAB® IDE

PICDEM MSC1 Demonstration Kit Contents

Ordering Information:

DM163012   PICDEM™ MSC1 Demonstration Kit
PICDEM™ MSC1 Daughter Boards

The following daughter boards, available separately, demonstrate additional capabilities of the PIC16C781/782 microcontrollers.

PICDEM™ MSC1 Switch Mode Power Supply (SMPS) Daughter Board

The PICDEM™ MSC1 Switch Mode Power Supply (SMPS) Daughter Board, in combination with the PICDEM MSC1 Demonstration Board, is a complete demonstration and evaluation kit for designing switch mode power supplies using the PIC16C781/782. The daughter board can be configured for the following switch mode power supply topologies:

- Boost: Output voltage greater than the supply voltage
- Buck: Output voltage less than the supply voltage
- Buck-Boost: Output voltage less than or greater than the supply voltage
- Invert: Negative output voltages

PICDEM™ MSC1 Infrared (IR) Driver Daughter Board

The PICDEM™ MSC1 Infrared (IR) Driver Daughter Board, in combination with the PICDEM MSC1 Demonstration Board, serves as a demonstration and evaluation kit for designing a high power IR remote control transmitter using the PIC16C782. The daughter board, in combination with the included IR receiver, implements both receive and transmit sections of a Pulse Width Modulation (PWM) IR remote control system.

PICDEM™ MSC1 Delta-Sigma ADC Daughter Board

The PICDEM™ MSC1 Delta-Sigma ADC Daughter Board, in combination with the PICDEM MSC1 Demonstration Board, serves as a demonstration and evaluation kit for designing high resolution Delta Sigma Analog-to-Digital Converters using the PIC16C781/782. The daughter board has the following features:

- All the components required to implement an 8 to 16-bit Delta-Sigma ADC
- An RCA connector for connecting an external sensor
- A generous prototyping area for building signal-conditioning circuitry
- An on-board temperature sensor for a demonstration input to the ADC

PICDEM™ MSC1 Flow Rate Sensor Daughter Board

The PICDEM™ MSC1 Flow Rate Sensor Daughter Board, in combination with the PICDEM MSC1 Demonstration Board, is a complete demonstration kit for a high sensitivity hot-wire anemometer-styled flow rate sensor using the PIC16C782.

MCP41XXX/42XXX Digital Potentiometer Evaluation Board

The MCP41XXX/42XXX Evaluation Board is a demonstration and evaluation tool for Microchip Technology's MCP41XXX/42XXX digital potentiometers. The MCP41XXX/42XXX Evaluation Board is designed to be used in conjunction with the MXDEV® Driver Board. When connected to the driver board with the included microcontroller installed, this evaluation board allows for the programming and evaluation of the MCP41XXX/42XXX digital potentiometer in a variety of applications.

Some of the applications that can be used for evaluation of the MCP41XXX/42XXX digital potentiometers include an offset circuit, low-pass filter, and gain circuits. A removable prototype area is available for quick-turn circuit evaluation. Evaluation of other operations, such as daisy chain, shutdown and reset, are also available. Software tools for the digital potentiometer and ADC are also provided for evaluation.

MCP41XXX/42XXX Digital Potentiometer Evaluation Board Contents

- MCP41XXX/42XXX Evaluation Board
- Removable Prototype Board
- MCP41XXX/42XXX Samples and Reprogrammable Microchip Flash PICmicro® MCU
- MXLAB® ADC Software
- RS-232 Cable
- 9V DC Power Supply
- Documentation, including the *MCP42XXX Evaluation Board User's Guide*

Ordering Information:

DV42XXX   MCP41XXX/42XXX Evaluation Board

MXDEV® 1 Analog Evaluation System Driver Board

The MXDEV 1 Analog Evaluation System gives system designers the ability to control Microchip stand-alone analog devices, acquire data and then analyze the data using strip-charts, histograms and Fast Fourier Transforms (FFTs). User-friendly data analysis software is included with the device-specific daughter boards.

The evaluation system consists of two parts: a driver board, which performs the data analysis and connects to a PC for subsequent analysis and display; and a daughter board, which plugs into the driver board and contains the device to be evaluated. Device-specific software is included.

In addition to the ability of the driver board to work with device-specific daughter boards, users can create their own daughter boards based on their own design requirements. In addition, a prototype area on the driver board is available for user-designed circuits that could be used in place of the daughter boards.

The MXDEV 1 Analog Evaluation System driver board contains three different PICmicro® microcontroller sockets (28-pin, 18-pin and 8-pin) so that users can choose the PICmicro MCU most suited to their application. It also includes an LCD display, an LED display socket, SRAM for data storage, and an RS-232 interface. The LCD display can display information, such as configuration data and acquisition data from the daughter board.

The daughter board kits contain the device to be evaluated and a PIC16F876 Flash microcontroller containing device-specific code. The microcontroller then plugs into one of the sockets on the DVMCPA. Code is also provided that shows how to interface the PIC16C54 and the PIC12C509 with the ADC.

MXDEV 1 Analog Evaluation System Driver Board Kit Contents

DV3204A   MXDEV® 1 MCP3XXX Quad/Octal Evaluation System Daughter Board Kit

Fan Controllers and Serial Temperature Sensor Demo Boards

TC642EV – Evaluation Kit for Brushless DC Fan Controllers

The TC642EV is a complete evaluation board for evaluation and prototyping brushless DC fan control circuits using Microchip's TC642, TC646, TC647, TC648 and TC649 BDC fan controllers. The fan speed control signal can be provided by an external sensor or voltage signal, or from the on-board potentiometer. Minimum speed setting and auto shutdown threshold are conveniently set by a potentiometer. Jumper blocks allow the user to quickly configure the output stage and input signal source and scaling. Test points provide easy access for instrument readings at critical nodes. A user prototyping area is provided for dedicated circuitry or other user specific circuits.

TC642DEMO – Fan Controller Demo Board for TC642/646/647/648/649

This Fan Control Module allows the user to quickly prototype fan control circuits based on Microchip's PWM Fan Control IC's (TC642, TC646, TC647, TC648 or TC649). This 1.5" by 2.0" board's versatile sensor input and output driver circuitry allows the Fan Control Module to be used with virtually any brushless DC fan and standard thermistor. An optional LED status indicator gives a visual indication of a fan fault condition (open stator, blocked rotor or over temperature fault detection). It uses through-hole components for easy user modification.

TC650DEMO – Fan Controller Demo Board for TC650/651

This 1.0" x 1.0" Fan Control Demo Board allows the user to quickly prototype fan control circuits based on Microchip's TC650 or TC651 PWM Fan Control IC's. The board can interface with virtually any brushless DC fan. A red LED status indicator gives visual indication of a fan fault condition (open stator or blocked rotor) and a green LED status indicator gives a visual indication of an over temperature alert (temperature is 10°C higher than the high temperature limit).

TC652DEMO – Fan Controller Demo Board for TC652/653

This 1.0" x 1.2" Fan Control Demo Board allows the user to quickly prototype fan control circuits based on Microchip's TC652 or TC653 PWM fan control IC's. The board can interface with virtually any brushless DC fan. A red LED status indicator gives visual indication of a fan fault condition (open stator or blocked rotor) and a green LED status indicator gives a visual indication of an over temperature alert (temperature is 10°C higher than the high temperature limit).

TC74DEMO – Serial Digital Temperature Sensor Demo Board

The TC74 Demo Board allows the user to evaluate the functionality of the tiny TC74 thermal sensor and perform comparative evaluation against other thermal management solutions. This 0.75" by 2.5" PC board is an ideal solution for identifying the temperature profile of applications like datacom, telecom and PC equipment. The easy-to-use software provides a visual representation of temperature profile and can interface with any PC.

MCP2510 CAN Developer's Kit

The MCP2510 CAN Developer's Kit is a multi-function tool that speeds implementation of the MCP2510 stand-alone CAN controller by offering functions for controlling its feature-set.

In addition, this tool can be used to demonstrate basic CAN input/output functionality and monitor bus activity on the user's CAN bus. It is ideal for new CAN user's that want to understand how CAN may be used for network communication.

MCP2510 CAN Developer's Kit Contents
• MCP2510 Target Board
• User Interface Software (runs under Windows® 95/98)
• PC Parallel Port Interface Cable
• Power Supply
• Documentation including *MCP2510 CAN Developer's Kit User's Guide*

Ordering Information:
DV251001   MCP2510 CAN Developer's Kit

MCP250XX CAN I/O Expander Developer's Kit

The MCP250XX CAN I/O Expander Developer's Kit includes everything needed to create a CAN-based system using Microchip's CAN I/O expander family. It can be used to evaluate, demonstrate and develop CAN nodes using these CAN I/O Expanders. The Demonstration mode has an MCP25050 that is configured prior to shipping and is programmed to manipulate analog inputs via potentiometers, PWM outputs via a piezoelectric buzzer and an incandescent lamp, and digital inputs via push-button switches. CAN messages can be sent and received between the Master node and the Demonstration node via the PC-user interface or via the input/output functionality discussed above. Users can also set up a watch window to display the message traffic as they manipulate the inputs and outputs. In this manner, the users can see a working network being demonstrated with one of the nodes being an MCP25050 CAN I/O expander device.

Another function of the developer's kit is that the PC, with included software, can be used to emulate an MCP250XX device. This mode is used to manipulate the registers of the MCP250XX devices in order to evaluate all of the different functionality and configurations of the device family. After users are comfortable with a configuration, they can then prototype their own CAN node. An unconfigured MCP250XX device is supplied with prototyping area, also included on the target board. A header is provided to enable oscilloscope access to the I/O pins for development and troubleshooting. Once prototyping is complete, the kit can be used to program up the device configuration in much the same manner that Microchip PICmicro® MCUs are programmed.

Features

- Speeds understanding of CAN I/O expander family
- Provides ability to prototype user-defined CAN node
- Enables programming of device default configuration directly from developer's kit
- Allows connection of external CAN networks
- Software watch window can be used as a basic CAN bus monitor

MCP250XX CAN I/O Expander Developer's Kit Contents
• Target Board with Three CAN Nodes Connected via a CAN Bus
• MCP250XX Product Samples
• PC Software to Interface to the Target Board

MCP2120/2150 Infrared Developer's Kit

The MCP2120/2150 Infrared Developer's Kit includes everything needed to create a system that communicates using infrared wireless communication. It educates the designer on the IR communications technology and IrDA® protocol and can then be used to integrate these technologies into the designers product allowing proof of concept.

The kit includes Microchip's revolutionary MCP2150 Infrared Communications Controller supporting the IrDA Standard. It can be set up to communicate with other IrDA devices like PDA's and mobile phones as well. Host Interface can be selected as a UART (DB-9) to a PC using Hyperlink or as a Master controller/ASIC to the header. The boards also offer two types of transceivers: the component version (which is lower cost but complicated) or the integrated version (which is simple but higher cost). The kit demonstrates two PC's communicating with each other via IR.

MCP2120/2150 Infrared Developer's Kit Contents
• Two MCP2120 IR Nodes
• One MCP2150 IR Node
• Product Samples
• Serial Cables
• Universal Power Supply
• Documentation

SEEVAL® 32 Serial EEPROM Designer's Kit
Microchip's SEEVAL 32 Serial EEPROM Evaluation and Programming System supports all Microchip Serial EEPROMs including future devices. Through the use of a ZIF socket, standard DIP packages are directly supported; the 8-lead SOIC, TSSOP, MSOP, DFN and 5-lead SOT-23 packages can also be supported by using separate third-party adapters. Both the SEEVAL 32 and SEEVAL systems give the designer or system integrator the ability to read, write or erase any byte, page or the entire array, and to display, save or load this data as a file. Whereas the original SEEVAL system supports only Windows® 95/98 operating systems, the new SEEVAL 32 development system and its improved host software and firmware capabilities now provide support for all the current Windows operating systems, including: Windows XP, Windows ME, Windows 2000, Windows NT® 4.0 and also Windows 95/98.

Both the SEEVAL and SEEVAL 32 systems provide advanced features to aid in system integration and debug. Through the use of test pins on each system, an oscilloscope or other test equipment can be easily connected to evaluate timing and voltage levels. Through the SEEVAL host software, serial EEPROMs can be tested by reading and writing data in the EEPROM under test and by evaluating checksum data. Erase/Write endurance can also be measured by selecting a Continuous Loop mode to repeatedly read/write/erase the EEPROM.

SEEVAL kits also include the Total Endurance Software Model, a powerful tool which can predict the erase/write endurance of any given serial EEPROM based upon its application parameters: temperature, voltage, cycles per day and bytes per cycle.

SEEVAL 32 Serial EEPROM Designer's Kit Contents
• Total Endurance Software Model
• SEEVAL 32 Evaluation and Programming System
• Serial EEPROM Sample Pack
• SEEVAL 32 Software
• RS-232 Interface Cable
• Power Supply

13.56 MHz Anticollision microID® Developer's Kit for MCRF355 and MCRF360

The 13.56 MHz microID Developer's Kit is an easy-to-use tool for design engineers at all skill levels. This kit includes all the hardware, software, reference designs, and samples required to get started in 13.56 MHz RFID designs.

This kit is intended to demonstrate basic operation of the high-performance MCRF355 tagging chip and basic design of a simple RFID reader.

microID MCRF355 and MCRF360 Developer's Kit Contents
• 13.56 MHz Anticollision Reader
• Contact Programmer
• Two Power Supplies
• Two RS-232 Cables
• RF-LAB 13.56 Software Interface (runs under Windows® 95/98, Windows 2000, Windows XP)
• Socketed Tags
• Flexible, Preprogrammed Performa™ tags by Checkpoint Systems Inc.
• Samples in DIP Form
• Documentation including a complete microID *13.56 MHz RFID System Design Guide* (Application Notes, Reference Designs and Tutorials)

              (This programmer is also included in the DV103006)
13.56 MHz Anticollision microID® Developer's Kit for MCRF355, MCRF360 and MCRF45X

The 13.56 MHz microID Developer's Kit is a high-speed, long-range, easy-to-use tool for design engineers at all skill levels. This kit includes all the hardware, software, reference designs, and samples required to get started in high-performance 13.56 MHz RFID designs.

This kit is designed to demonstrate all 13.56 MHz RFID devices, including: MCRF355/360 and MCRF450/451/452/455 and to provide a basic platform for high-performance RFID reader design.

microID MCRF355, MCRF360 and MCRF45X Developer's Kit Contents

- 13.56 MHz Read/Write Interrogator
- Contact Programmer for MCRF355/360
- Two Power Supplies
- Two RS-232 Cables
- RF-LAB 13.56 Software Interface (runs under Windows® 95/98, Windows 2000, Windows XP)
- Socketed Tags
- Flexible, Preprogrammed Performa™ tags by Checkpoint Systems Inc.

KEELOQ® Evaluation Kit II

The KEELOQ Evaluation Kit II provides the opportunity to evaluate KEELOQ code hopping technology quickly and easily without having to make a large capital investment. The evaluation kit contains all the hardware and software necessary to implement a fully functional remote control system and demonstrate all operating modes of the following devices: HCS101, HCS200, HCS201, HCS300, HCS301, HCS320, HCS360, HCS361, HCS362, HCS365 and HCS370 encoders.

The kit can also be used to program and demonstrate the encoder functionality of the HCS410, HCS412 and HCS473 transponders (transcoders).

KEELOQ Evaluation Kit II Contents
• Programmer and Decoder Demonstration Board
• Two KEELOQ Transmitter Demo Boards
• Sample Kit Containing Various KEELOQ Encoder and Decoder Samples
• KEELOQ Secure Data Product CD

BATTERY MANAGEMENT

© 2004 Microchip Technology Inc.

DS30177S-page 89

NOTES:

PowerSmart® Battery Manager Evaluation Kits for 2, 3 and 4 Series Cell Lithium Ion/Polymer Chemistries

The PowerSmart Battery Manager Evaluation Kits for Lithium Ion/Polymer chemistries provide the opportunity to evaluate a Microchip battery management solution for Lithium-based battery packs. The evaluation kit contains all of the hardware and software necessary to implement a functional SmartBattery pack with a primary and secondary safety circuit and a LED state-of-charge display. The kit can be used to configure and demonstrate functionality of the PS501Battery Manager IC.

PowerSmart Battery Manager Evaluation Kit for Lithium Ion/Polymer Chemistries Contents
• Battery Manager Module for Lithium Ion/ Polymer Battery Packs • PowerInfo™ 2 Configuration Interface • USB Cable • RS-232 Cable • Power Supply • Battery Management PC Software CD

Ordering Information:

PS5162EV   PowerSmart® Battery Manager Evaluation Kit for Lithium Ion/Polymer Chemistries (2-cell)

PS5163EV   PowerSmart® Battery Manager Evaluation Kit for Lithium Ion/Polymer Chemistries (3-cell)

PS5164EV   PowerSmart® Battery Manager Evaluation Kit for Lithium Ion/Polymer Chemistries (4-cell)
PowerSmart® Battery Manager Evaluation Kit for Nickel Chemistries

The PowerSmart Battery Manager Evaluation Kit for NiMH/NiCAD chemistries provides the opportunity to evaluate a Microchip battery management solution for six to ten series cell Nickel-based battery packs. The evaluation kit contains all of the hardware and software necessary to implement a functional SmartBattery pack with a LED state-of-charge display. The kit can be used to configure and demonstrate functionality of the PS402 Battery Manager IC and the PS4200 Battery Manager Module.

PowerSmart Battery Manager Evaluation Kit for Nickel Chemistries Contents
• Battery Manager Module for 6-10 series cell NiMH/NiCAD Battery Packs
• PowerInfo™ 2 Configuration Interface
• RS-232 Cable
• Power Supply
• Battery Management PC Software CD

Ordering Information:

PS4200EV   PowerSmart® Battery Manager Evaluation Kit for Nickel Chemistries

PowerSmart® Battery Monitor Evaluation Kit for 1 and 2 Series Cell Lithium Ion/Polymer Chemistries

The PowerSmart Battery Monitor Evaluation Kit for Lithium Ion/Polymer chemistries provides the opportunity to evaluate a Microchip battery monitor solution for one or two series cell Lithium-based battery packs. The evaluation kit contains all of the hardware and software necessary to incorporate a functional fuel gauge and safety module into a battery pack. The kit can be used to configure and demonstrate functionality of the PS700 Battery Monitor IC.

PowerSmart Battery Monitor Evaluation Kit for 1 and 2 Series Cell Lithium Ion/Polymer Chemistries Contents
• Battery Monitor Evaluation Board (PS7070) for 1 and 2 series cell Lithium Ion/Polymer Battery Packs
• PowerInfo™ 2 Configuration Interface (PS051)
• USB Cable
• Battery Management PC Software CD

Ordering Information:

PS7070EV   PowerSmart® Battery Monitor Evaluation Kit for 1 and 2 Series Cell Lithium Ion/Polymer Chemistries

NOTES 1: MPLAB® ICE 2000 pod available separately. (ICE2000)
2: MPLAB® ICE 4000 pod available separately. (ICE4000)
3: PRO MATE® II Programmer unit available separately. (DV007003)
4: Optional In-Circuit Serial Programming™ (ICSP™) Socket for PRO MATE® II available separately. (AC004004)
5: PICSTART® Plus (DV003001)
6: MPLAB® ICD 2 In-Circuit Debugger. Configurations are:
(DV164005) ICD 2 module, USB cable and ICD cable.
(DV164006) ICD 2 module, USB cable, ICD cable, serial cable, PICDEM™ 2 Plus and power supply.
(DV164007) ICD 2 module, USB cable, ICD cable, serial cable and power supply;
(DV164030) ICD 2 Evaluation Kit includes: ICD 2 module, USB cable, ICD cable, serial cable and dsPICDEM™ Starter Demo Board;
(AC162049) ICD 2 Universal Programming Module;
(AC162051) ICD or ICD 2 28/40 PDIP Header Interface Board.
7: Custom adapter required; not available from Microchip. See "Readme" for PICSTART® Plus.
8: MPLAB® PM3 Programmer Unit available separately. (DV007004). ICSP™ function is built-in with MPLAB® PM3 Programmer.
(AC164350) MPLAB® PM3 Adapter for PRO MATE® II Socket modules.

* New product or future support. Contact Microchip web site at www.microchip.com for availability.
✓ Supported with basic configuration. If a part number is listed in the column, that part is required and available separately.

Development Systems Ordering Guide

Demonstration Boards and Evaluation Kits (9)

Part Number	Description
PICmicro® Demonstration Kits	
DM143001	PICDEM™ 14A Demo Board for PIC14C000
DM163001	PICDEM™ 1 Demo Board for PIC16C5X, 55X, 62X, CE62X, 71, 710, 711, 715, 770, 771, 83, 84, and PIC17C42, 43, 44
DM163003	PICDEM™ 3 Demo Board for PIC16C923, 924, 925, 926
DM163006	PICDEM™ 18R Demo Board for PIC18C601/801
DM163014	PICDEM™ 4 Demo Board for PIC12F629, 675, PIC16F630, 676, 684, 627A, 628A, 648A, 818, 819, 87, 88, PIC18F1220, 1320
DM163022	PICDEM™ 2 Plus Demo Board for PIC16C62, 63, 64, 65, 66, 67, 72, 73, 74, 76, 77, 87X, 773, 774 and PIC18CXX2, 642, 662, and PIC18FXXX
DV164101	PICkit™ 1 8/14P Flash Development Kit for PIC12F629, 675 and PIC16F630, 676
DV164102	rfPIC® Development Kit 1
AC164101	rfPIC® Transmitter Module (433.92 MHz)
AC164102	rfPIC® Transmitter Module (315 MHz)
AC164103	rfRXD Receiver Module (433.92 MHz)
AC164104	rfRXD Receiver Module (315 MHz)
DM173001	PICDEM™ 17 Demo Board for PIC17CXX
DM183011	PICDEM™ MC Demo Board for PIC18F2331, 2431, 4331, 4431
DM183020	PIC18FXX20 64/80L TQFP Demo Board for PIC18F6620, 6720, 8620, 8720, 6520, 8520
Connectivity Demonstration Kits	
DM163004	PICDEM.net™ TCP/IP Demo Board
DM163005	PICDEM™ LIN Demo Board for PIC16C432/433 LIN bus
DM163007	PICDEM™ CAN-LIN 1 Demo Board
DM163008	MCP2120/2150 Developer's Kit for IR Communication
DM163010	PICDEM™ USB Demo Board for PIC16C7X5
DM163011	PICDEM™ CAN-LIN 2 Demo Board
DM163015	PICDEM™ CAN-LIN 3 Demo Board
DV250501	MCP250XX CAN Developer's Kit
DV251001	MCP2510/2515 CAN Developer's Kit
Mixed Signal Control Demonstration Kits	
AC163001	PICDEM™ MSC 1 Voltage Boost Demo Board; requires DM163012
AC163002	PICDEM™ MSC 1 High Power IR Demo Board; requires DM163012
AC163003	PICDEM™ MSC 1 Delta Sigma Demo Board; requires DM163012
AC163004	PICDEM™ MSC 1 Flow Rate Sensor Demo Board; requires DM163012
DM163012	PICDEM™ MSC 1 Mixed Signal Controller Demo Board for PIC16C781/782

* Contact Microchip web site at www.microchip.com for availability.

Demonstration Boards and Evaluation Kits (9)

Part Number	Description
dsPIC™ 16-bit DSC Demonstration Kits	
DM300004-1	dsPICDEM.net™ 1 FCC/JATE PSTN Support, Ethernet NIC Demo Board
DM300004-2	dsPICDEM.net™ 2 CTR-21 PSTN Support, Ethernet NIC Demo Board
DM300014	dsPICDEM™ 1.1 General Purpose Demo Board
DM300016	dsPICDEM™ Starter Demo Board
DM300017	dsPICDEM™ 28-Pin Starter Demo Board
DM300020	dsPICDEM™ MC1 Motor Control Development Board
DM300021	dsPICDEM™ MC1H 3-Phase High Voltage Power Module
DM300022	dsPICDEM™ MC1L 3-Phase Low Voltage Power Module
dsPIC™ 16-bit DSC Software Tools	
SW300001	Digital Filter Design
SW300002*	dsPIC™ V.22/V.22bix Soft Modem Library
SW300003, 04, 05*	dsPIC™ V.32 Soft Modem Library
SW300006*	dsPIC™ V.22/V.22bix Soft Modem Library by Vocal Technology
SW300010, 11, 12*	dsPIC™ Speech Recognition
SW300020	dsPIC30 Math Library: Double-Precision Floating Point Routines
SW300021	dsPIC30 Peripheral Library: Peripheral Initialization and Control Routines
SW300022	dsPIC30 DSP Library: Data Signal Processing Library Suite (FFT, Filters)
SW300023	dsPICworks™ Visual Algorithm Analyzer: Data Analyzer and Converter Tool
SW300030	CMX Scheduler: Multi-tasking, Preemptive Scheduler for dsPIC30F
SW300060 - 5K, 25K, 100K	Acoustic Echo Cancellation Library
SW300031	CMX-RTX for dsPIC™ DSC: Fully Preemptive RTOS
SW300032	CMX-Tiny+ for dsPIC™ DSC: Preemptive RTOS
SW300040 - 5K, 25K, 100K	Noise Suppression Library
SW300050 - 5K, 25K, 100K	dsPIC™ Symmetric Embedded Encryption Library
SW300055 - 5K, 25K, 100K	dsPIC™ Asymmetric Embedded Encryption Library

* Contact Microchip web site at www.microchip.com for availability.

Development Systems Ordering Guide

PowerSmart® Systems

Model Name/Part Number	Description
PS040*	PowerTool™ Development Software for PS401 and PS402 Applications
PS042	PS401 PowerCal™ Board
PS051	PowerInfo™ 2 Configuration Interface Board for use with PS70X and PS50X.
PS052	PowerCal™ 2 Configuration Interface Board for use with PS70X and PS50X.
PS070*	PowerMate™ Development Software for PS700 Applications
PS4160-3	3-cell Li-Ion Fuel Gauge
PS4160-4	4-cell Li-Ion Fuel Gauge
PS4160EV-3	3-cell Li-Ion Fuel Gauge with PS041 PowerInfo™ Board
PS4160EV-4	4-cell Li-Ion Fuel Gauge with PS041 PowerInfo™ Board
PS4200	6-12 cell NiMH Fuel Gauge
PS4200EV	6-12 Cell NiMH Fuel Gauge with PS041 PowerInfo™ Board
PS5162*	2-cell Li-Ion/Poly Fuel Gauge with safety
PS5162EV*	2-cell Li-Ion/Poly Fuel Gauge with safety and PS051 PowerInfo™ 2
PS5163*	3-cell Li-Ion/Poly Fuel Gauge with safety
PS5163EV*	3-cell Li-Ion/Poly Fuel Gauge with safety and PS051 PowerInfo™ 2
PS5164*	4-cell Li-Ion/Poly Fuel Gauge with safety
PS5164EV*	4-cell Li-Ion/Poly Fuel Gauge with safety and PS051 PowerInfo™ 2
PS7051*	Single Cell Li-Ion Fuel Gauge with safety
PS7052*	Two Cell Li-Ion Fuel Gauge with safety
PS7070	PS700 Battery Monitor Evaluation Board
PS7070EV	PS700 Battery Monitor Evaluation Board with PS051 PowerInfo™ 2

* Contact Microchip web site at www.microchip.com for availability.

Development Systems Ordering Guide

NOTES:

NOTES:

Development Systems Ordering Guide

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.

- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.

- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.

- Microchip is willing to work with the customer who is concerned about the integrity of their code.

- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Trademarks

The Microchip name and logo, the Microchip logo, Accuron, dsPIC, KEELOQ, microID, MPLAB, PIC, PICmicro, PICSTART, PRO MATE, PowerSmart, rfPIC, and SmartShunt are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AmpLab, FilterLab, MXDEV, MXLAB, PICMASTER, SEEVAL, SmartSensor and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, Application Maestro, dsPICDEM, dsPICDEM.net, dsPICworks, ECAN, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, Migratable Memory, MPASM, MPLIB, MPLINK, MPSIM, PICkit, PICDEM, PICDEM.net, PICLAB, PICtail, PowerCal, PowerInfo, PowerMate, PowerTool, rfLAB, rfPICDEM, Select Mode, Smart Serial, SmartTel and Total Endurance are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
ISO/TS 16949:2002

Microchip received ISO/TS-16949:2002 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona and Mountain View, California in October 2003. The Company's quality system processes and procedures are for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
