2. Other precautions

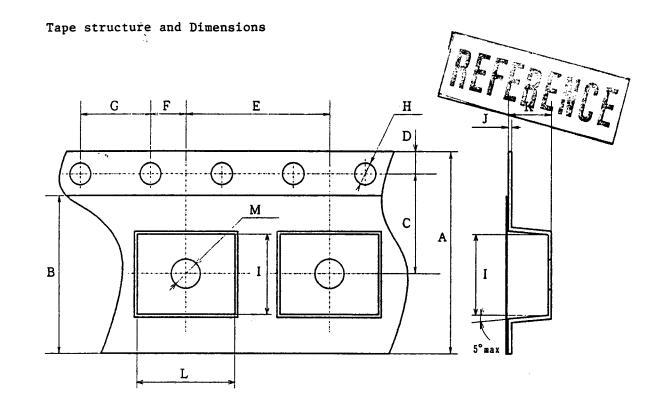

An infrared lamp used to heat up for soldering may cause a localized temperature rise in the resin. So keep the package temperature within that specified in Item 1. Also avoid immersing the resin part in the solder. Even if within the temperature profile above, there is the possibility that the gold wire in package is broken in case that the deformation of PWB gives the affection to lead pins. Please use after confirmation the conditions fully by actual solder reflow machine.

 Package specifications (#178mm reel) Application This specification applies to the taping specifications and the relation items for the GP23/I series. C Taping method (2.1) Tape structure and Dimensions (Refer to the attached sheet-2-2) The tape shall have a structure in which a cover tape is sealed heat- pressed on the carrier tape of hard vinyl-chloride to protect against static electricity. (2.2) Reel structure and Dimensions (Refer to the attached sheet-2-3) The taping reel shall be corrugated cardboard-made with its dimensions as shown in the attached drawing. (2.3) Direction of product insertion (Refer to the attached sheet-2-3) Froduct direction in carrier tape shall direct to the anode mark at the hole side on the tape. Adhesiveness of cover tape The exfoliation force between carrier tape and cover tape shall be 0.2N(0.024gf) to 1N(0.1kgf) for the angle from 160° to 180°. Kolling method and quanfity Wind the tape back on the reel so that the cover tape will be outside the tape. Attach more than 20cm of blank tape to the trailer and the leader of the tape and fits the both ends with adhesive tape. One reel shall contain 1000 pcs. Marking The outer packaging case shall be marked with following information. * Model No. * Number of pieces delivered * Production date Safety protection during shipping There shall be no deformation of component or degradation of electrical characteristees due to shipping.
