CD4021A Types

CMOS 8-Stage Static Shift Register

Asynchronous Parallel Input/Serial Output,
Synchronous Serial Input/Serial Output

The RCA-CD4021A types are 8-stage parallel or serial-input/serial-output shift registers having common CLOCK and PARALLEL/SERIAL CONTROL inputs, a single SERIAL DATA input, and individual parallel Jam inputs to each register stage. Each register stage is a D-type, master-slave flip-flop. Q outputs are available from the sixth, seventh, and eighth stages.

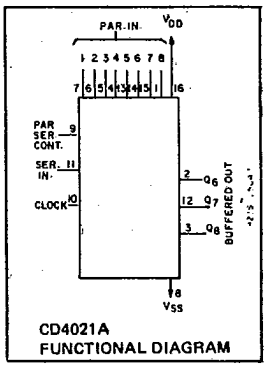
When the PARALLEL/SERIAL CONTROL input is low, data are serially shifted into the 8-stage register synchronously with the positive-going transition of the CLOCK pulse.

Features:

- Asynchronous parallel or synchronous serial operation under control of parallel/serial control-input
- Individual JAM inputs to each register stage
- Master-slave flip-flop register stages
- Fully static operation. . . . . DC to 5 MHz
- Quiescent current specified to 15 V
- Maximum input leakage current of 1 μA at 15 V (full package-temperature range)
- 1-V noise margin (full package-temperature range)

When the PARALLEL/SERIAL CONTROL input is high, data are jammed into the 8-stage register via the parallel input lines asynchronously with the clock line.

Register expansion is possible using additional CD4021A packages.



CD4021A
FUNCTIONAL DIAGRAM

These types are supplied in 16-lead hermetic dual-in-line ceramic packages (D and F suffixes), 16-lead dual-in-line plastic package (E suffix), 16-lead ceramic flat package (K suffix), and in chip form (H suffix).

Applications:

- Parallel to serial data conversion
- Asynchronous parallel input/serial output data queueing
- General purpose register

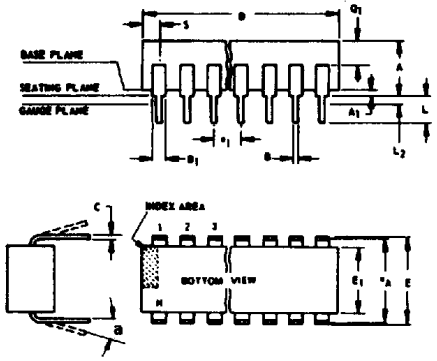
Dimensional Outlines

Dual-In-Line Welded-Seal Ceramic Packages



NOTES:
Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.
1. When this device is supplied solder-dipped, the maximum lead thickness (narrow portion) will not exceed 0.013" (0.33 mm).
2. Leads within 0.005" (0.12 mm) radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
3. e_A applies in zone L_2 when unit installed.
4. α applies to spread leads prior to installation.
5. N is the maximum quantity of lead positions.
6. N_1 is the quantity of allowable missing leads.

NOTES:

Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.

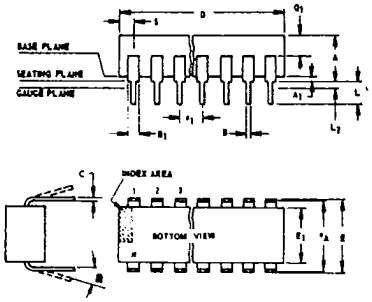
1. When this device is supplied solder-dipped, the maximum lead thickness (narrow portion) will not exceed 0.013".
2. Leads within 0.005" (0.12 mm) radius of True Position (TP) at guage plane with maximum material condition and unit installed.
3. e_A applies in zone L_2 when unit installed.
4. α applies to spread leads prior to installation.
5. N is the maximum quantity of lead positions.
6. N_1 is the quantity of allowable missing leads.

Dimensional Outlines (Cont'd)

Dual-In-Line Plastic and Frit-Seal Ceramic Packages (Cont'd)



NOTES:
Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.
1. When this device is supplied solder dipped, the maximum lead thickness (narrow portion) will not exceed 0.013" (0.33 mm).
2. Leads within 0.005" (0.12 mm) radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
3. e_A applies in zone L_2 when unit installed.
4. α applies to spread leads prior to installation.
5. N is the maximum quantity of lead positions.
6. N_1 is the quantity of allowable missing leads.
