## FULLY PROTECTED HIGH SIDE POWER MOSFET SWITCH

### Features

- Over temperature protection (with auto-restart)
- Short-circuit protection (current limit)
- Active clamp
- E.S.D protection
- Status feedback
- Open load detection
- Logic ground isolated from power ground

### Product Summary

$R_{ds(on)}$	80mΩ (max)
$V_{\text{clamp}}$	50V
$I_{\text{Limit}}$	10A
$V_{\text{open load}}$	3V

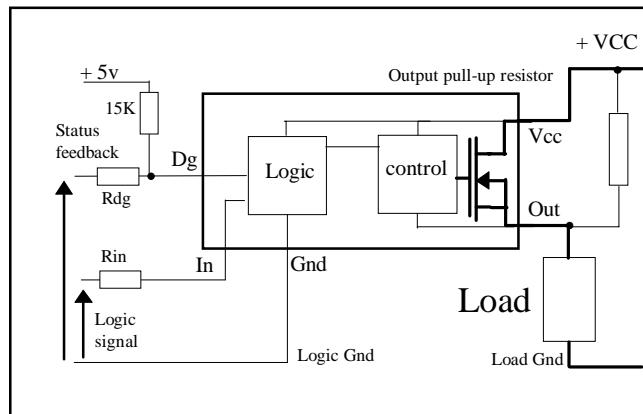

### Description

The IPS521/IPS521S are fully protected five terminal high side switches with built in short-circuit, over-temperature, ESD protection, inductive load capability and diagnostic feedback. The output current is controlled when it reaches  $I_{lim}$  value. The current limitation is activated until the thermal protection acts. The over-temperature protection turns off the high side switch if the junction temperature exceeds  $T_{\text{shutdown}}$ . It will automatically restart after the junction has cooled 7°C below  $T_{\text{shutdown}}$ . A diagnostic pin is provided for status feedback of short-circuit, over-temperature and open load detection. The double level shifter circuitry allows large offsets between the logic ground and the load ground.
