

**Dual/Quad Low Noise,
Precision Operational Amplifiers**
FEATURES

- Low Noise
 - Input Offset Voltage
 - Low Offset Voltage Drift
 - Very High Gain
 - Outstanding CMRR
 - Slew Rate
 - Gain Bandwidth Product
 - Industry Standard Pinouts
- 5nV/ $\sqrt{\text{Hz}}$ @ 1kHz Max
 OP-270: 75 μV Max
 OP-470: 400 μV Max
 OP-270: 1 $\mu\text{V}/^\circ\text{C}$ Max
 OP-470: 2 $\mu\text{V}/^\circ\text{C}$ Max
 OP-270: 1500V/mV Min
 OP-470: 1000V/mV Min
 OP-270: 106dB Min
 OP-470: 110dB Min
 3.0V/ μs Typ
 6MHz Typ

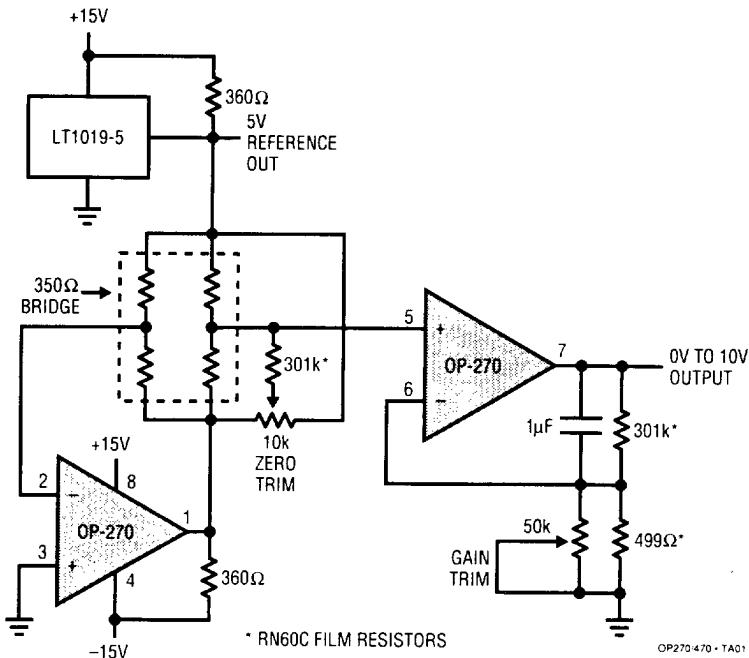

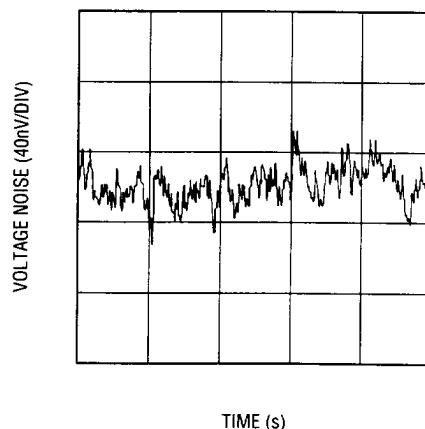

APPLICATIONS

- Two and Three Op Amp Instrumentation Amplifiers
- Low Noise Signal Processing
- Microvolt Accuracy Threshold Detection
- Strain Gauge Amplifiers
- Accelerometer Amplifiers
- Infrared Detectors

DESCRIPTION

The OP-270 dual and OP-470 quad are high performance op amps with 80nVp-p noise, from 0.1Hz to 10Hz, offering comparable performance to the industry standard OP-27. The OP-270 (OP-470) feature input offset voltage below 75 μV (400 μV) and offset drift under 1 $\mu\text{V}/^\circ\text{C}$ (2 $\mu\text{V}/^\circ\text{C}$), guaranteed over the full military temperature range. Open-loop gain of the OP-270 (OP-470) is over 1.5 million (1.0 million) into a 10k Ω load ensuring excellent gain accuracy and linearity, even in high-gain applications. Input bias current is under $\pm 20\text{nA}$ ($\pm 25\text{nA}$) which reduces errors due to signal source resistance. The OP-270's (OP-470's) CMRR of over 106dB (110dB) and PSRR of less than 3.2 $\mu\text{V}/\text{V}$ (1.8 $\mu\text{V}/\text{V}$) significantly reduce errors due to ground noise and power supply fluctuations. Power consumption of the dual OP-270 (quad OP-470) is one-third less than two (four) OP-27's, a significant advantage for power conscious applications. The OP-270 and OP-470 are unity-gain stable with a gain bandwidth product of 6MHz and a slew rate of 3.0V/ μs .

For applications requiring higher performance, see the LT1124 and LT1125 data sheets.

Strain Gauge Signal Conditioner with Bridge Excitation

0.1Hz to 10Hz Voltage Noise

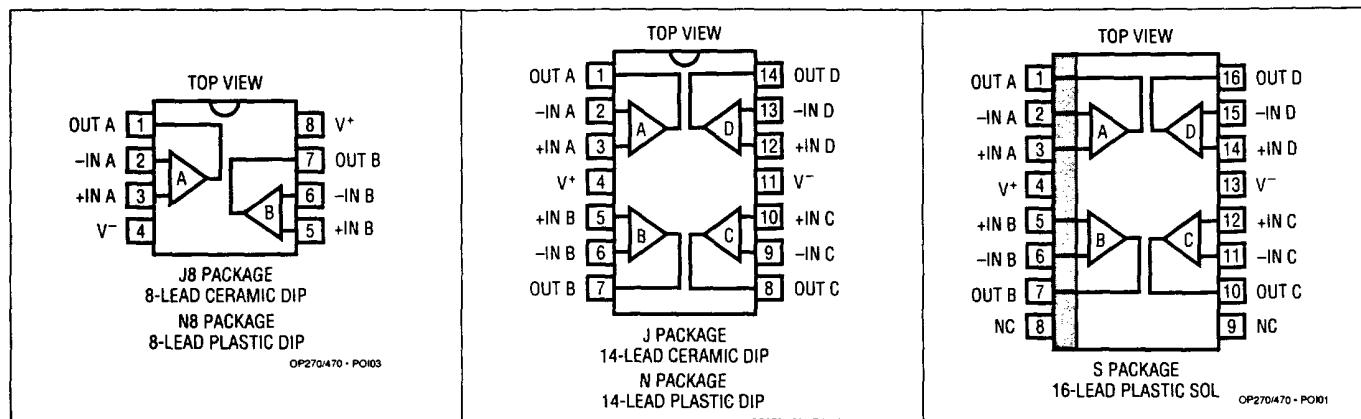

OP-270/470 - TA02

ABSOLUTE MAXIMUM RATINGS

Supply Voltage $\pm 18V$
 Differential Input Voltage (Note 4) $\pm 1.0V$
 Differential Input Current (Note 4) $\pm 25mA$
 Input Voltages Equal to Supply Voltages
 Output Short Circuit Duration Indefinite

Operating Temperature Range

OP270A/OP470A $-55^{\circ}C$ to $125^{\circ}C$
 OP270E/OP470E
 OP270G/OP470G $-40^{\circ}C$ to $85^{\circ}C$
Storage Temperature Range
 All Grades $-65^{\circ}C$ to $150^{\circ}C$
 Lead Temperature (Soldering, 10 sec.) $300^{\circ}C$

The ● denotes the specifications which apply over the full operating temperature range.

Note 1: This parameter is guaranteed but not 100% tested.

Note 2: This parameter is sample tested only.

Note 3: This parameter is guaranteed by the CMRR test.

Note 4: The inputs are protected by back-to-back diodes. Current limiting resistors are not used in order to achieve low noise. If differential input voltage exceeds $\pm 1.4V$, the input current should be limited to 25mA.

ELECTRICAL CHARACTERISTICS $V_S = \pm 15V$, $-40^\circ C \leq T_A \leq 85^\circ C$, unless otherwise noted.
