SERIES DESIGNATION	RELAY TYPE
A152	Attenuator relay series

**DESCRIPTION**

The Series A152 highly repeatable ultraminiature attenuator relays are designed for attenuating RF signals in 50-ohm systems over a frequency range from DC to 5 GHz. Their low profile and small grid spacing makes them ideal for use when packaging density is a prime consideration. The A152 relays eliminate the need for additional external resistors/attenuators.

These single section, switchable attenuator relays have an internal matched thin film attenuator pad in a "Pi" configuration. Relays are available in a fixed increment of 20 dB.

The A152 attenuator relay features:

- High repeatability.
- Unique uni-frame motor design which provides high magnetic efficiency and mechanical rigidity.
- Minimum mass components and welded construction for maximum resistance to shock and vibration.
- Advanced cleaning techniques which assures internal cleanliness.
- Gold plated, precious metal contacts, which provide excellent intermodulation performance.
- Flat amplitude vs. frequency response.
- High isolation between control and signal path.
- Stable attenuation vs. temperature.
- Excellent phase linearity.
- Highly resistant to ESD.

Switching Time ms (Note 8)	Max.	4.0			
	Typ.	2.0			
Insulation Resistance	1,000 MΩ typical (all mutually isolated points)				
Dielectric Strength	300 VRMS / 60 Hz typical (at sea level)				

- GENERAL NOTES**
- Contacts will exhibit no contact chatter in excess of 10 μs or transfer in excess of 1 μs.
  - Relays may be operated at higher frequencies with reduced RF performance.
  - For optimal RF performance, solder case to RF ground plane.
  - Attenuation values shown are with reference to the through path (low loss state).
  - Power handling for case temperatures of -55°C to +55°C is 1 Watt. Derate power handling 25 mW/°C above +55°C. Case measurement point is adjacent to the relay tab.
  - Do not operate coil at maximum coil voltage continuously.
  - Insert attenuation value, see part numbering system.
  - Switching time includes bounce.
  - The slash and characters appearing after the slash are not marked on the relay.
  - Unless otherwise specified, relays will be supplied with either gold-plated or solder-coated leads.

1. Test conditions:
  - a. Fixture: Custom plug-in test fixture.
  - b. Relay header is in contact with, but not soldered to, ground plane.
  - c. Test performed at room ambient temperature.
  - d. Contact signal level: 10 dBm.
2. Data presented herein represents typical characteristics and is not intended for use as specification limits.
3. Insertion loss repeatability measured over frequency range from 3 MHz to 5 GHz.
